Presentation on Capstone Project Execution (CPE–316004)

Topic	Purohit Mitra : An Online Pandit Booking Platform	
Presented by	1. Bhumika Tushar Dixit	
	2. Madhavi Hemkant Dixit	
	3. Khushi Rajendra Joshi	
	4. Tanushree Prakash Pande	
Guided by	Ms. S. S. Hajari	
Semester	**Sixth (K Scheme)**	**Date : 06/03/2026**

Abstract

This web-based platform connects **yajmans (users)** with **pandits** for performing Hindu rituals and pujas. Its goal is to make booking a pandit simple, transparent, and organized. The website provides information about different pujas, including their significance, required samagri, and procedures. Users can browse pujas, view samagri lists, and send booking requests. Pandits can accept or reject requests, and once accepted, the booking details such as date, puja type, and pandit information are shown in the user's profile.

1. Introduction

- In traditional society, people depend on Pandits for performing religious rituals such as puja, havan, marriage, vastu shanti, and other ceremonies. Finding a suitable Pandit at the right time is often difficult and time-consuming. There is no centralized digital system to manage bookings, availability, and communication between users and Pandits.
- This project provides a web-based platform where users can book Pandits online for different religious services. Pandits can accept or reject requests, and users can track the booking status in real time. The system makes the process simple, fast, and transparent.

2. Literature Review

- Earlier systems mainly relied on:
    1. Manual phone calls
    2. Personal references
    3. Local agents
- Some existing religious websites only provide information but do not support real-time booking and tracking. Few mobile apps offer booking but lack:
    1. Status tracking
    2. Role separation (User & Pandit)
    3. Organized service management
- Hence, there is a need for a dedicated web application that handles user requests, Pandit responses, and booking status efficiently.

3. Scope of the project

- In – Scope : The scope of the project includes

1. User registration and login
2. Pandit registration and login
3. List of available pujas
4. Booking request by user
5. Acceptance or rejection by Pandit
6. Display of booking status in user profile
7. Separate profiles for User and Pandit
8. Display of required samagri
9. Aarti collection for different deities

3. Scope of the project

- Out – Scope : Future scope can include

    1. Online payment
    2. Location-based Pandit search
    3. Multi-Language support
    4. Mobile application

4. Methodology

- The project follows these steps:

    1. Requirement analysis
    2. Design of UI and database
    3. Frontend development using React
    4. Backend development using server APIs
    5. User authentication
    6. Booking module implementation
    7. Testing and debugging
    8. Deployment

4. Methodology

- The system works on client-server architecture where:

    1. Frontend handles user interface
    2. Backend handles data and logic
    3. Database stores user and booking details

5. Details of designs, working & processes

5.1 Project follows following block diagram:

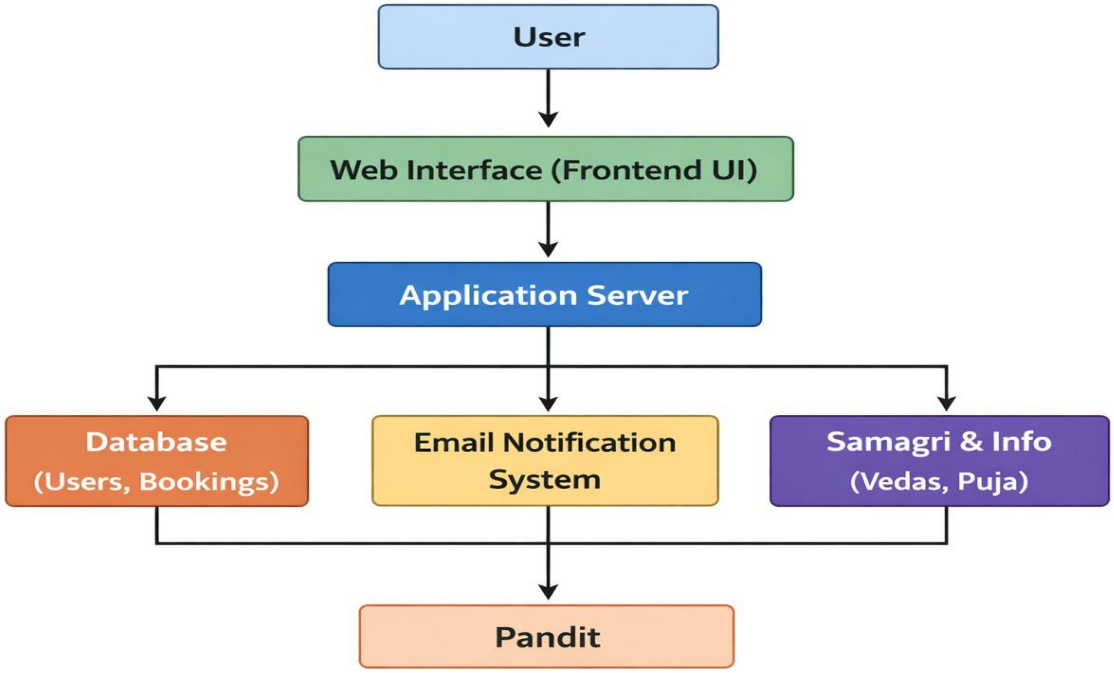

Fig 5.1.1 Block Diagram of system Architecture

5. Details of designs, working & processes

5.2 Pandit Module Working:

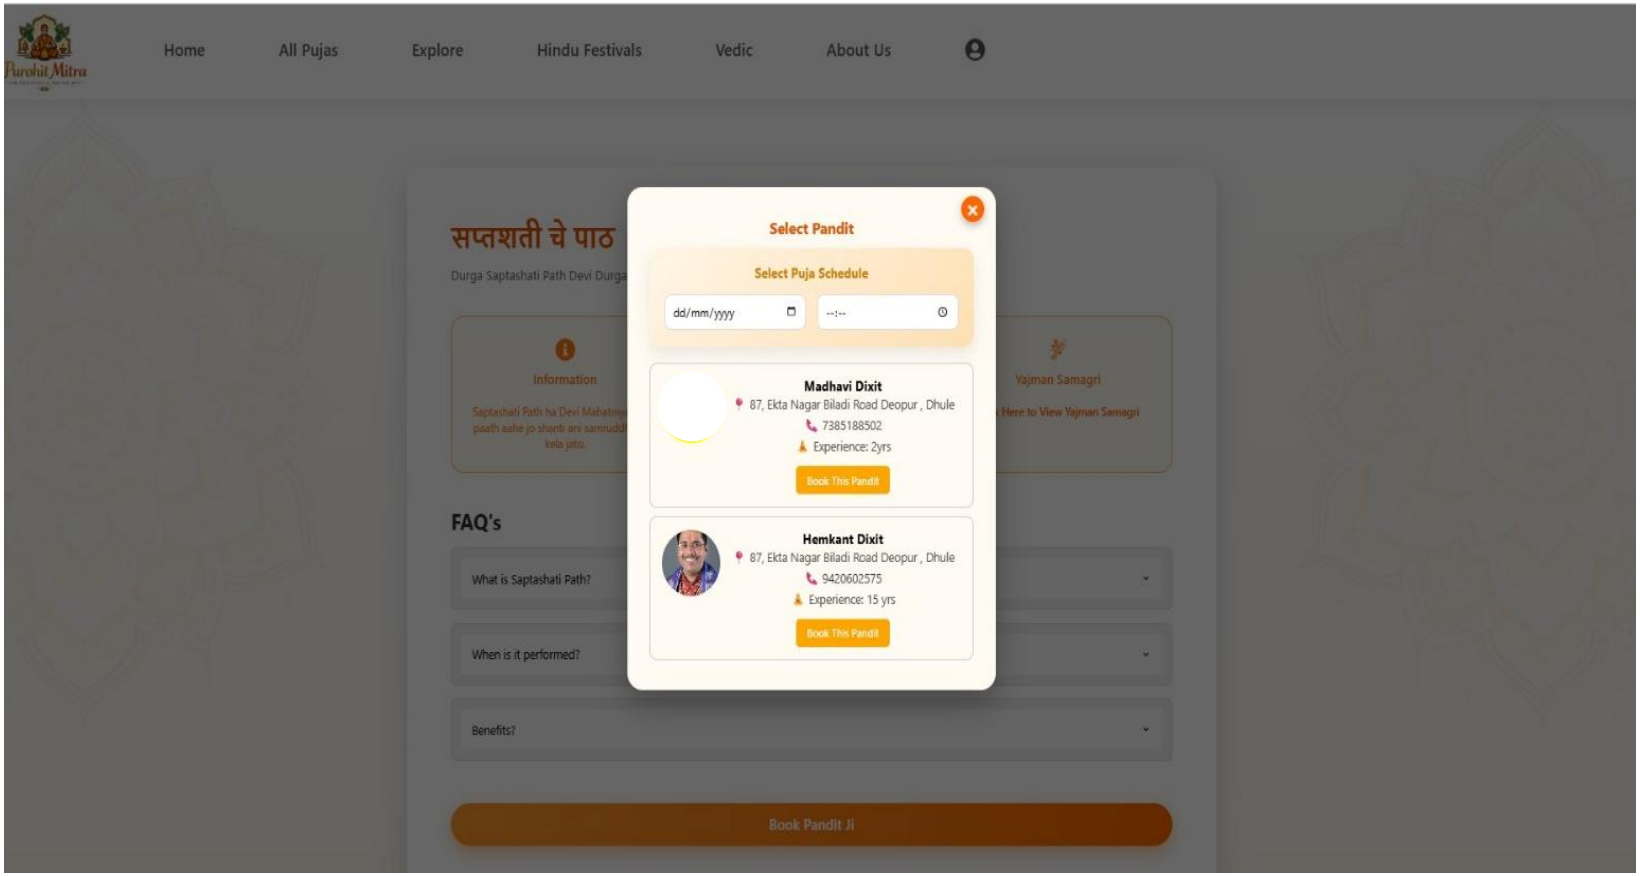
- Pandit Booking:



7. Conclusion and future scope

- **Conclusion:**

  The Pandit Booking System successfully provides an online platform to connect users and Pandits. It simplifies the booking process, improves communication, and provides transparency through status tracking. It reduces manual work and improves efficiency.

7. Conclusion and future scope

- **Future Scope:**
    1. Online payment gateway
    2. GPS-based Pandit search
    3. Mobile app version
    4. Chat between user and Pandit
    5. Review and rating system
