Signature and Seal:

ACKNOWLEDGMENT

We would like to express our sincere gratitude to all those who helped us in the successful completion of this project. First and foremost, we would like to thank our project guide, **Mrs. S. S. Hajari**, for her valuable guidance, continuous support, and encouragement throughout the development of this project. Her suggestions and feedback helped us improve our work at every stage.

We would also like to express our heartfelt thanks to our respected Head of Department, **Mr. N. D. Patel**, for his constant encouragement and support.

We are also thankful to our teachers and department for providing the necessary resources and knowledge required to complete this project successfully. We would like to express our gratitude to our friends and classmates for their support, motivation, and valuable suggestions during the project development.

Finally, we would like to thank our families for their constant encouragement and support, which helped us stay focused and complete this project on time. This project has helped us gain practical knowledge and improve our technical as well as problem-solving skills.

Your sincerely,

Bhumika Tushar Dixit

Madhavi Hemkant Dixit

Khushi Rajendra Joshi

Tanushree Prakash Pande

ABSTRACT

In today's digital era, people prefer online solutions for various services, including religious activities. Our project focuses on developing a web-based platform that connects users with Pandits for performing various pujas, havans, and religious rituals in a simple and efficient way. The main objective of this project is to provide an easy and user-friendly system where users can register, explore different pujas, and book a Pandit by selecting a suitable date and time. On the other hand, Pandits can register on the platform, receive booking requests, and accept or reject them based on their availability.

The system also provides separate dashboards for users and Pandits. Users can view their booking status, while Pandits can manage incoming requests. Additionally, the website includes informative sections such as Vedic knowledge, Bhagavad Gita, Ramayan, spiritual quotes, prayers, and Hindu festivals to enhance user experience. Email notification functionality is implemented to keep both users and Pandits updated about booking status. The platform is designed to be secure, interactive, and easy to use.

This project helps in digitalizing traditional religious services and makes it more accessible, organized, and convenient for users. It also provides practical exposure to web development technologies and improves problem-solving skills.

CHAPTER 1

INTRODUCTION AND BACKGROUND OF INDUSTRY

1.1 Introduction :

In the modern digital age, technology has become an essential part of everyday life. People increasingly rely on online platforms for various services such as shopping, education, and communication. However, traditional religious services like booking a Pandit for pujas, havans, and rituals are still mostly managed offline, which can be time-consuming and inconvenient. To address this problem, we have developed a web-based platform that simplifies the process of connecting users with Pandits. This system allows users to easily explore different pujas, select suitable dates and times, and book a Pandit from the comfort of their homes. At the same time, Pandits can manage booking requests efficiently through a dedicated dashboard.

The website not only focuses on booking services but also provides valuable spiritual and religious information. It includes sections such as Vedic knowledge, Bhagavad Gita, Ramayan, prayers, spiritual quotes, and information about Hindu festivals, making it a complete platform for both services and knowledge. The system is designed with a user-friendly interface, ensuring easy navigation and accessibility for all users. It also includes features like booking status tracking and email notifications to enhance communication between users and Pandits. Overall, this project aims to bridge the gap between traditional religious practices and modern technology by providing a convenient, organized, and efficient online solution.

1.2 Introduction To Industry

The religious and spiritual services sector plays an important role in preserving cultural traditions and values in India. Various communities and organizations work towards maintaining and promoting these traditions by organizing rituals, ceremonies, and religious events.

Our project is developed in association with ‘ **Shri Shukla Yajurvedi Govardhan Brahman Mandal** ’ **Dhule** , which is a well-known community organization of Brahmins. This mandal is actively involved in conducting and supporting various religious activities, rituals, and social services for the community.

The organization consists of experienced Pandits who perform different types of pujas, havans, and Vedic rituals. However, most of these services are managed through traditional offline methods, which can be time-consuming and less organized. With the advancement of technology, there is a growing need to digitalize such services to make them more accessible and efficient. Our project aims to support this initiative by providing an online platform where users can easily connect with Pandits, book services, and access religious information. This platform will not only help the mandal to manage their services in a better way but will also benefit users by providing a convenient and user-friendly solution for booking religious rituals. Thus, this project bridges the gap between traditional religious practices and modern digital technology, contributing to the growth and development of the spiritual service sector.

CHAPTER 2

LITERATURE SURVEY AND SPECIFICATION

2.1 Study Of Existing System / Review Of Research Papers

In the current scenario, most religious services such as booking Pandits for pujas, havans, and rituals are carried out through traditional offline methods. People usually contact Pandits through personal references, phone calls, or local networks. Some online platforms and mobile applications have been developed to provide religious services. These platforms allow users to view available pujas and book Pandits. However, many of these systems are limited in functionality and are not widely used in smaller communities.

Research studies on online service platforms highlight the importance of digital transformation in traditional sectors. These studies emphasize features such as user-friendly interfaces, real-time booking systems, and efficient communication between service providers and users. However, most existing systems lack proper integration of features like detailed samagri lists, user and Pandit dashboards, and structured booking management systems. Additionally, many platforms do not provide sufficient religious or educational content. Therefore, there is a need for a more organized and user-friendly system that combines both service booking and spiritual information in a single platform.

2.2 Limitations Of Existing System / Problems Discussed In Research Papers

The existing systems for booking religious services face several limitations:

- Most systems are based on offline communication, which is time-consuming.
- Lack of a centralized platform to connect users and Pandits.
- Difficulty in finding available Pandits at the required time.
- No proper system to track booking status.
- Limited or no digital record of bookings.
- Lack of transparency in service availability.
- Absence of user-friendly interfaces in many platforms.
- No proper separation of user and Pandit functionalities.
- Lack of additional features such as samagri details and spiritual content.
- Limited use of notification systems for updates.

These limitations highlight the need for a better and more efficient system.

2.3 Problem Definition

In the current system, booking a Pandit for religious rituals such as pujas, havans, and ceremonies is mostly done through traditional offline methods like personal contacts, phone calls, or local references. This process is unorganized, time-consuming, and often unreliable. Users face difficulties in finding available Pandits at the required time and location. There is no proper system to manage bookings, track their status, or ensure confirmation. Communication gaps between users and Pandits can also lead to confusion and delays.

Additionally, there is no centralized platform that provides complete information about pujas, required samagri, and related religious content. This creates inconvenience for users and limits the efficiency of service providers. Therefore, there is a need for a digital solution that simplifies the process, improves communication, and provides a structured system for booking and managing religious services.

2.4 Specification

The proposed system is designed as a web-based platform that connects users and Pandits for performing various religious rituals such as pujas and havans. The system includes user and Pandit registration and login functionality to ensure secure access. Users can explore different types of pujas, select a suitable date and time, and send booking requests to Pandits. The Pandits can view these requests through their dashboard and have the option to accept or reject them based on their availability.

The system also provides separate dashboards for both users and Pandits, where users can track the status of their bookings, and Pandits can manage incoming requests. Additionally, the platform displays the required samagri for each puja, helping users to prepare in advance. Email notifications are integrated into the system to keep both users and Pandits informed about booking updates. Apart from booking services, the system also includes informative sections such as Vedic knowledge, Bhagavad Gita, Ramayan, prayers, spiritual quotes, and Hindu festivals. The overall system is designed to be user-friendly, secure, and efficient, ensuring a smooth and organized experience for all users.

2.5 Questionnaire For Requirements Survey

During our literature survey, we interacted with both Pandits (service providers) and users (customers) to understand the current system of booking religious services, challenges faced, and user requirements.

- **Questions for Pandits / Service Providers:**

a) What types of pujas, havans, or religious rituals do you perform?

b) How do you currently receive booking requests (phone calls, personal contacts, etc.)?

c) What challenges do you face in getting more clients or bookings?

d) Do you maintain any record of your bookings and services?

e) How do you manage your availability for different bookings?

f) What charges or pricing strategy do you follow for different pujas?

g) Are you interested in providing your services through an online platform?

h) What kind of features would you expect from a digital system (e.g., booking management, notifications)?

i) How do you currently communicate booking confirmation or cancellation to users?

j) Do you face any issues related to travel, time management, or scheduling?

- **Questions for Users (Yajman / Users):**

a) How do you usually find or contact a Pandit for religious rituals?

b) What difficulties do you face while booking a Pandit?

c) What factors do you consider before selecting a Pandit (experience, cost, availability, etc.)?

d) What type of pujas or rituals do you usually require?

e) Do you prefer booking services online rather than offline? Why?

f) How important is it for you to know the availability of a Pandit in advance?

g) Would you like to track your booking status online?

h) What features would you prefer in such a system (e.g., easy booking, notifications, detailed puja information)?

i) Do you prefer receiving confirmation through email or messages?

j) How important is trust, authenticity, and experience of the Pandit to you?

CHAPTER 3

SCOPE OF PROJECT

The scope of this project is to design and develop a web-based platform named "Purohit Mitra", which provides a digital solution for booking Pandits for various religious rituals such as pujas, havans, and ceremonies. The system aims to simplify the traditional process of finding and booking Pandits by providing a structured and user-friendly online platform.

The proposed system focuses on connecting users and Pandits through a centralized platform where both can register and interact efficiently. Users can explore different types of pujas, check Pandit availability, and send booking requests, while Pandits can manage their bookings and schedules effectively.

- **Roles and Functional Scope**

1) Pandit Module

• Register and create their profile on the platform
• Add details about pujas and services they provide
• Manage availability (date and time)
• Receive booking requests from users
• Accept or reject booking requests
• View and manage their bookings
• Communicate with users if required

2) User Module

• Register and login into the system
• Browse available pujas and services
• Search and select suitable Pandits
• Send booking requests by selecting date and time
• View booking status (pending/confirmed/rejected)
• Access details like puja information and required samagri
• Receive notifications regarding booking updates

- **System Features within Scope**

• Simple and user-friendly web interface
• Online Pandit booking system
• Separate dashboards for users and Pandits
• Booking request and management system

• Notification system (email or message)
• Display of puja details and required samagri

- **Out of Scope (Future Enhancements)**

• Online payment integration
• Live video consultation with Pandits
• GPS-based Pandit location tracking
• Advanced recommendation system
• Mobile application development

- **Conclusion**

Overall, this project serves as a step towards digitalizing traditional religious services. It simplifies the process of booking Pandits and improves communication between users and service providers. The platform makes religious services more accessible, organized, and efficient while preserving traditional practices.

CHAPTER 4

METHODOLOGY

The project follows a structured Software Development Life Cycle (SDLC) approach to ensure systematic planning, design, and development of the proposed system.

1. Requirement Identification

The first step involved identifying the requirements of the system by studying the traditional process of booking Pandits for religious rituals. The needs of users and Pandits were analyzed to understand the challenges faced in offline booking methods. This study helped identify issues such as lack of proper communication, difficulty in finding available Pandits, and absence of a centralized platform for managing bookings.

2. System Planning and Design

Based on the identified requirements, a web-based platform was planned to connect users and Pandits. The overall system architecture was designed to include user and Pandit modules. The database structure and user roles such as User and Pandit were clearly defined. The user interface was designed to be simple, user-friendly, and visually appealing, ensuring easy navigation across different sections like pujas, havans, and informational pages.

3. System Development

During this phase, the web application was developed using modern technologies. Features such as user registration, Pandit registration, login system, puja listing, booking functionality, and dashboards were implemented. Additional features like samagri display, informative pages (Vedic knowledge, Bhagavad Gita, Ramayan, etc.), and email notification system were also integrated to enhance the user experience.

4. Testing and Evaluation

After development, the system was tested to ensure that all functionalities work correctly. The booking process, login system, dashboards, and notifications were thoroughly checked. The usability of the platform was evaluated to ensure that both users and Pandits can easily interact with the system without any difficulty.

5. Implementation

Finally, the proposed system demonstrates how a digital platform can simplify the process of booking Pandits for religious rituals. The system provides a

structured and efficient solution that connects users and Pandits, making the entire process convenient, organized, and user-friendly.

4.1 Block Diagram Of System

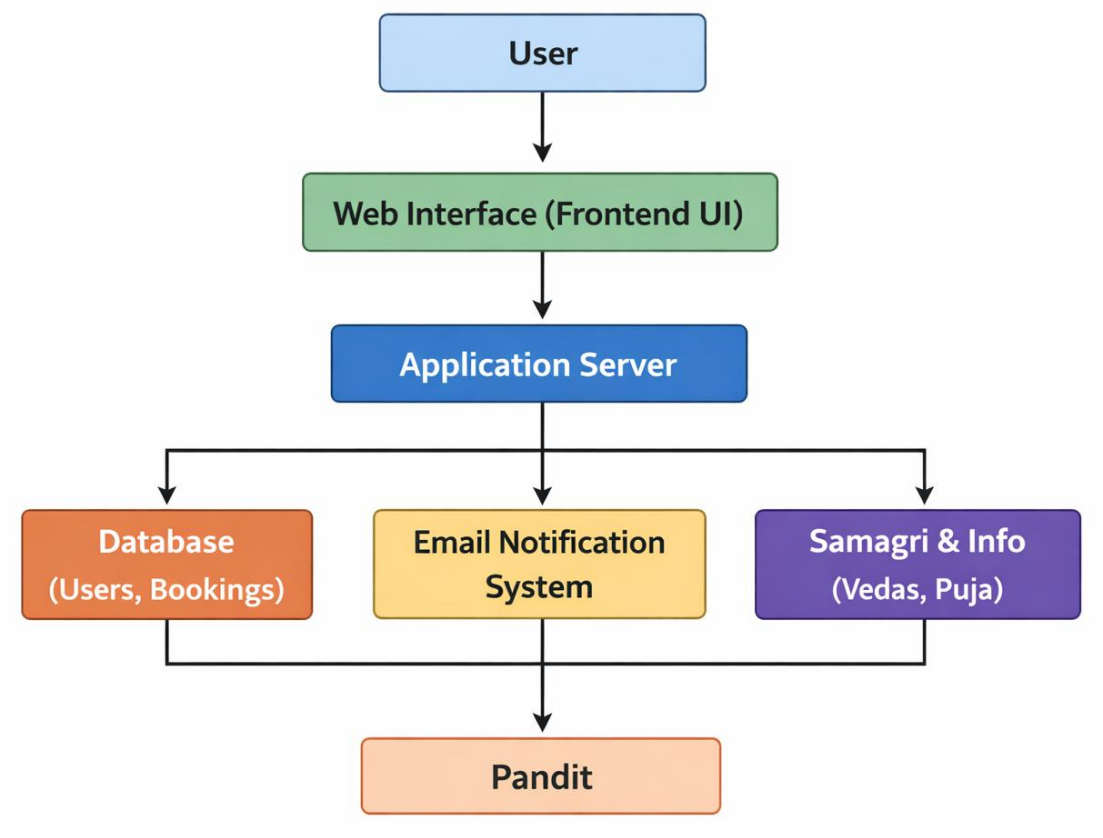

Fig 4.1 Block Diagram of Purohit Mitra

Block Diagram Explanation

The block diagram represents the overall working of the Online Pandit Booking System and shows how different components interact with each other. The process begins with the user, who accesses the system through the web interface. The web interface, also known as the frontend, provides various features such as login, registration, puja selection, and booking forms. All the inputs given by the user are sent to the application server. The application server acts as the core part of the system, where all the processing and logic are handled. It manages user authentication, booking requests, and communication between different modules. The server interacts with the database, where all the information related to users, Pandits, and bookings is stored securely.

In addition to this, the system includes an email notification module that sends updates to both users and Pandits regarding booking requests, acceptance, or rejection. Another important component is the samagri and information module, which provides details about required puja materials and various religious content

such as Vedas, Bhagavad Gita, Ramayan, and festivals. Finally, the Pandit receives the booking request through the system and can either accept or reject it based on availability. Once the action is taken, the status is updated in the system and reflected in the user's dashboard. Thus, the entire system ensures a smooth and efficient flow of information between users and Pandits.

4.2 Action Plan

1. **Problem Identification**
   The traditional method of booking Pandits for religious rituals was studied to identify the challenges faced by users and Pandits. Issues such as lack of proper communication, difficulty in finding available Pandits, and absence of a centralized system were identified.
2. **Requirement Collection**
   The system requirements were identified by analyzing the needs of users and Pandits. Features such as user registration, Pandit registration, puja listing, booking requests, dashboards, and notification systems were considered.
3. **System Planning**
   The overall structure of the web-based platform was planned, including defining system modules, user roles (User and Pandit), and the workflow of booking and request handling.
4. **System Design**
   The user interface design, database structure, and layout of the platform were created to ensure a simple, user-friendly, and well-organized system.
5. **Development of Key Modules**
   Important modules such as user login/signup, Pandit login/signup, puja listing, booking system, dashboards, samagri display, and email notification system were developed.
6. **Testing and Evaluation**
   The developed system was tested to ensure proper functionality, smooth user interaction, and error-free performance of all modules including booking and notification system.
7. **Final Documentation**
   All system processes, features, and working of the project were documented properly to represent the complete model of the proposed online Pandit booking system.

CHAPTER 5

DETAILS OF DESIGNS, WORKING AND PROCESSES

5.1 Working Of System:

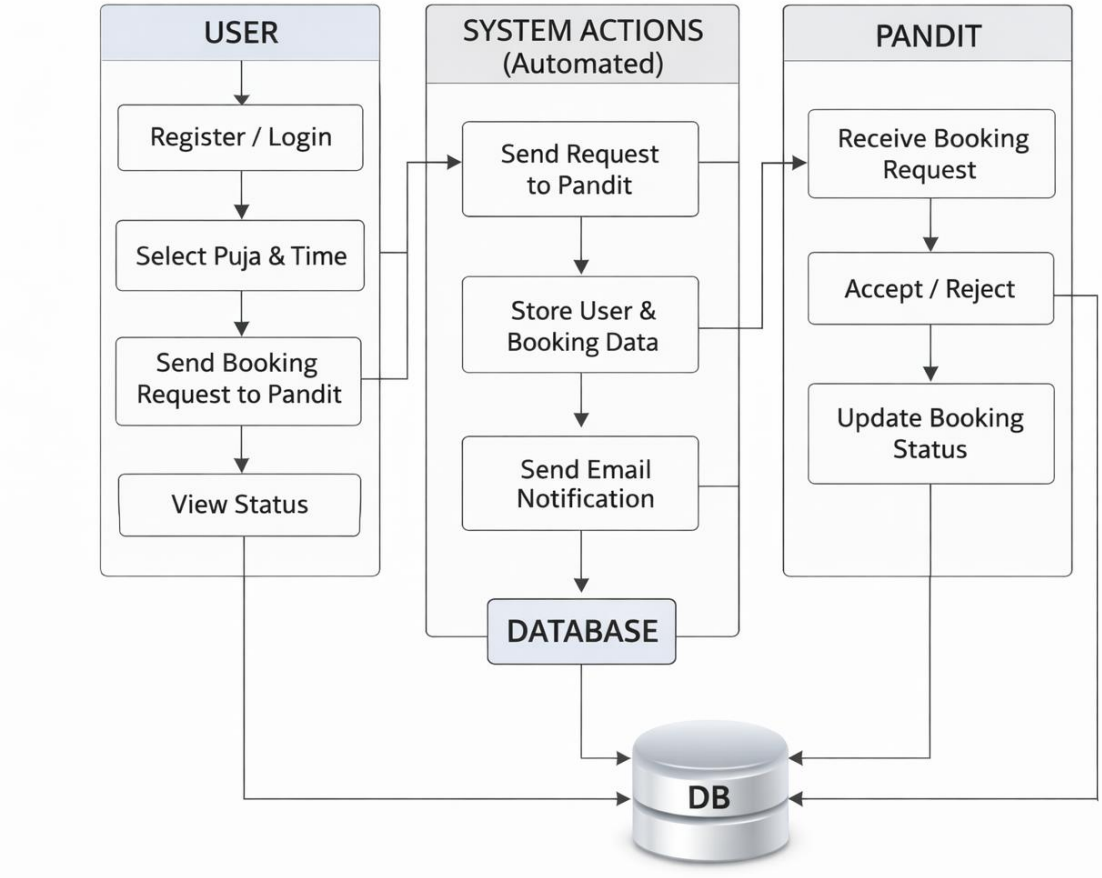

Fig 5.1 Working of Purohit Mitra

This diagram represents the **working of the Online Pandit Booking System**, showing how the User, System, Pandit, and Database interact with each other.

The process starts with the **User**, who first registers or logs into the system. After logging in, the user selects the desired puja along with a suitable date and time. Once the details are entered, the user sends a booking request to the Pandit through the system. The user can also view the booking status later from their profile dashboard.

Next, the **System Actions (Automated)** handle all the background processes. The system receives the booking request from the user and forwards it to the selected Pandit. It also stores all user and booking-related information in the database. Additionally, the system sends email notifications to keep both the user and the Pandit informed about the booking updates.

On the **Pandit side**, the Pandit receives the booking request sent by the system. The Pandit then reviews the request and either accepts or rejects it. Based on this

decision, the Pandit updates the booking status. This updated status is then reflected back to the user.

Finally, the **Database** acts as the central storage unit of the system. It stores all important data such as user details, booking information, and status updates. Both the system and Pandit interact with the database to retrieve and update information, ensuring smooth functioning of the entire application.

5.2 Pandit Module Workflow :

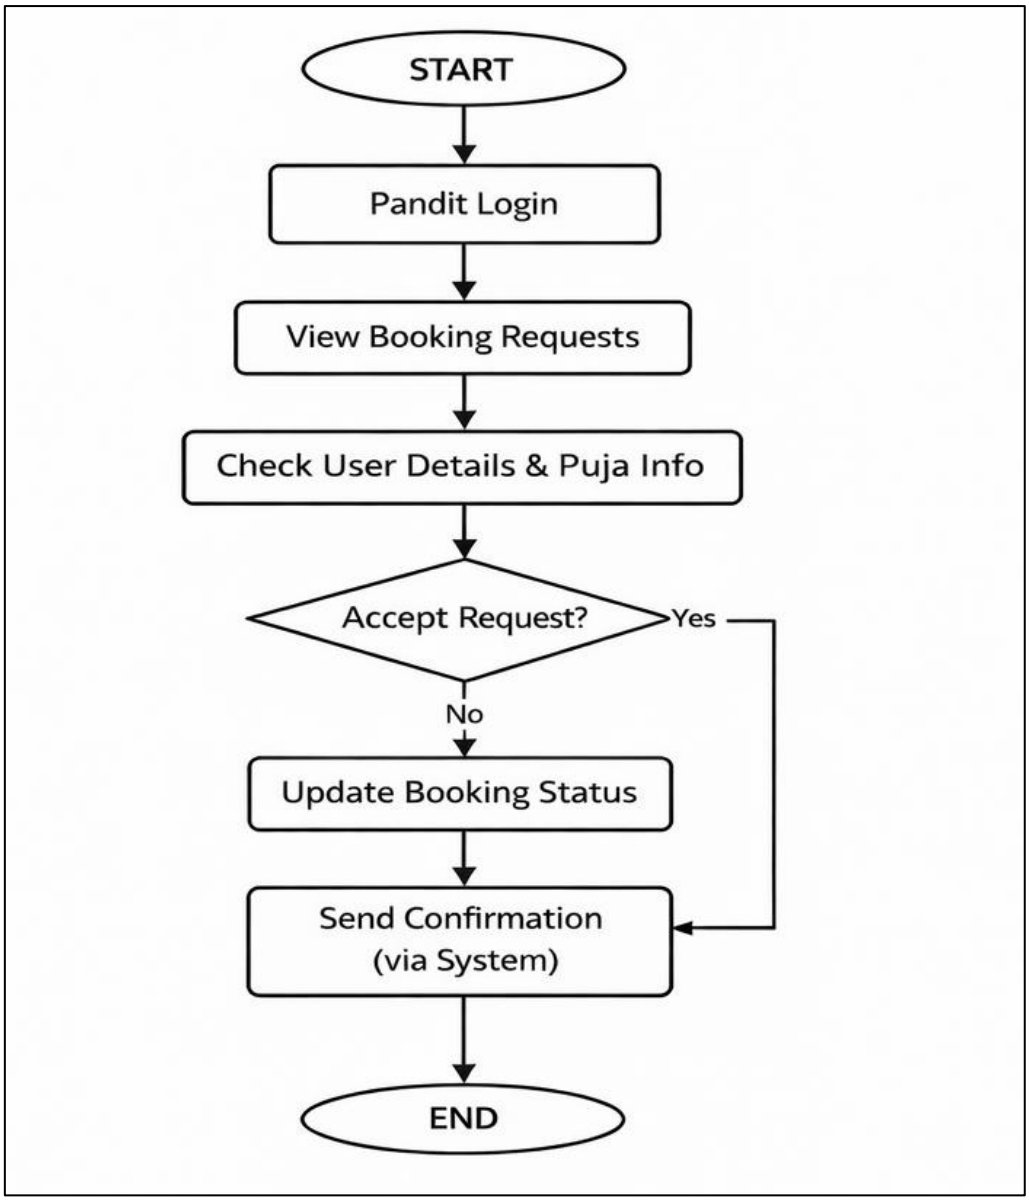

Fig 5.2 Workflow of Pandit Module

The Pandit module flowchart explains how the Pandit interacts with the system after receiving a booking request. The process starts when the Pandit logs into the system. The Pandit then views all incoming booking requests sent by users. After checking the details such as puja type, date, and time, the Pandit decides whether

to accept or reject the request. If accepted, the booking is confirmed; otherwise, it is rejected. The Pandit then updates the booking status in the system. This updated status is stored in the database and reflected back to the user. Thus, the Pandit module ensures proper handling and response to booking requests.

- ## Pandit Module Features :

1. **Pandit Registration & Login** – Pandits can register and access their account.
2. **View Booking Requests** – Pandits can see all incoming booking requests.
3. **Check Puja Details** – Pandits can view details like date, time, and puja type.
4. **Accept / Reject Requests** – Pandits can approve or decline booking requests.
5. **Update Booking Status** – Pandits update the status based on their decision.
6. **Pandit Dashboard** – Pandits can manage all bookings in one place.
7. **View Booking History** – Pandits can track past and current bookings.
8. **Receive Notifications** – Pandits get alerts for new booking requests.

5.3 User Module Workflow :

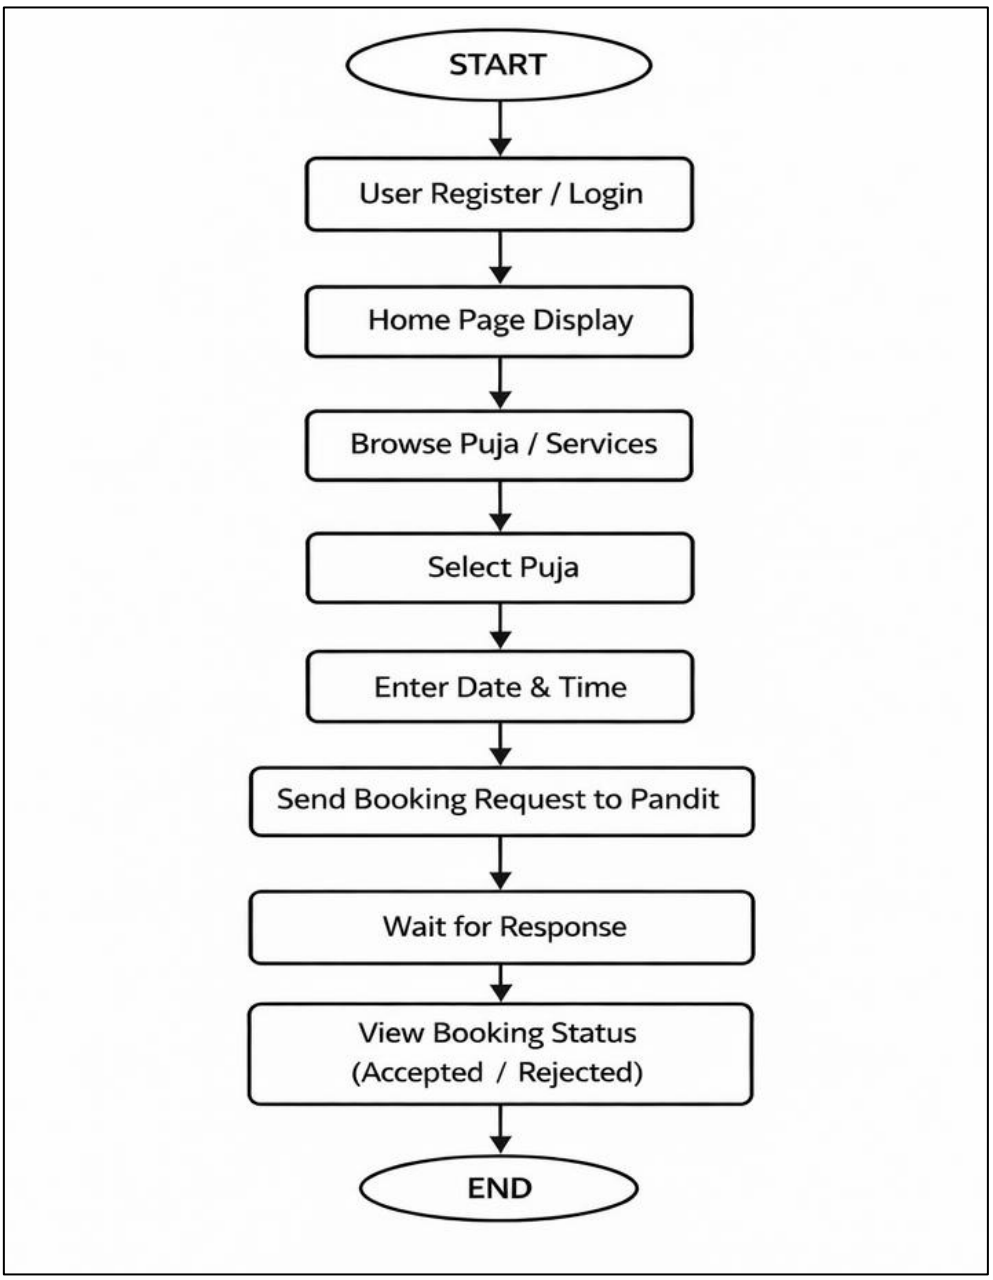

Fig 5.3 Workflow of User Module

The user module flowchart shows the step-by-step process followed by a user to book a Pandit. The process begins when the user registers or logs into the system. After successful login, the user is directed to the home page where various pujas and services are available. The user browses and selects a desired puja, then enters the preferred date and time for the ceremony. Once the details are filled, the user sends a booking request to the Pandit through the system. After sending the request, the user waits for the Pandit's response. Finally, the user can view the booking status (accepted or rejected) in their profile dashboard. This completes the user workflow.

- **User Module Features :**

1. **User Registration & Login** – Users can create an account and securely log in.
2. **Browse Puja Services** – Users can view different pujas and religious services.
3. **Puja Selection** – Users can select a specific puja as per their requirement.
4. **Date & Time Selection** – Users can choose a suitable schedule for the puja.
5. **Send Booking Request** – Users can send booking requests to Pandits.
6. **Booking Status Tracking** – Users can check whether the request is accepted or rejected.
7. **View Samagri List** – Users can see required materials for the selected puja.
8. **User Dashboard** – Users can manage bookings and view history.
9. **Email Notifications** – Users receive updates about booking status via email.

5.4 Entity-Relationship Diagram :

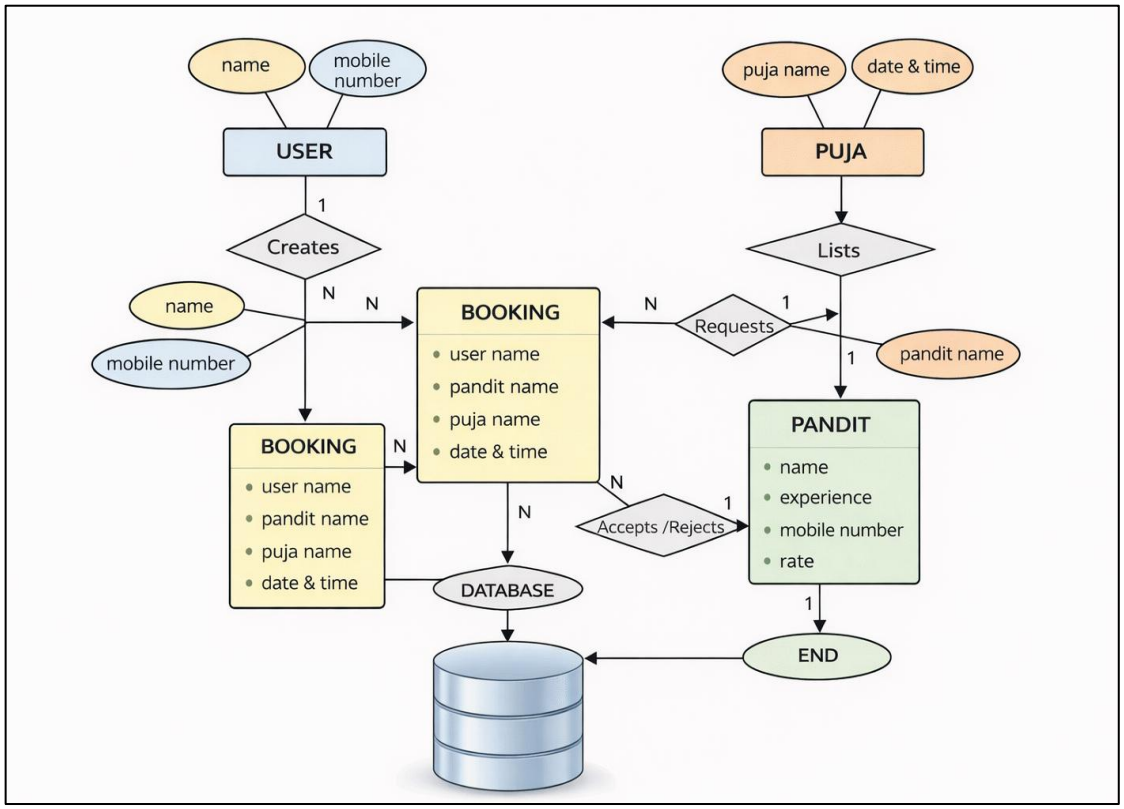

Fig 5.4 E-R Diagram of System

The ER diagram represents the structure of the Online Pandit Booking System with four main entities: User, Pandit, Puja, and Booking. The User entity contains basic details like name and mobile number, while the Pandit entity includes name, experience, mobile number, and puja rate. The Puja entity stores information such as puja name, date, and time along with associated user and pandit names. The

Booking entity acts as a connection between User and Pandit, storing details like user name, pandit name, puja name, and scheduled date and time. The relationships show that a user can create multiple bookings, and a pandit can handle multiple pujas and bookings. All the information is managed in a centralized database, ensuring smooth interaction between users and pandits in the system.

- **Database Entities Description :**

1. **USER**

   Stores information about users who book pandit services.

   • Name: User full name

   • Mobile Number: Contact number

2. **PANDIT**

   Stores information about pandits who provide puja services.

   • Name: Pandit name

   • Experience: Years of experience

   • Mobile Number: Contact number

   • rate: Charges for performing puja

3. **PUJA**

   Stores details about different puja services available in the system.

   • Puja Name: Name of the puja

   • Date: Scheduled date

   • Time: Scheduled time

   • Pandit Name: Assigned pandit

   • User Name: Requested by user

4. **BOOKING**

   Stores booking details between user and pandit.

   • User Name: Name of user

   • Pandit Name: Name of pandit

   • Puja Name: Type of puja

   • Date: Booking date

   • Time: Booking time

5.5 Relationships Between Entities

Table 5.5 Relationships Between Entities

Relationship	Cardinality & Meaning
USER → BOOKING	1 : N — One user can create multiple bookings
BOOKING → USER	N : 1 — Each booking belongs to one user
PUJA → PANDIT	1 : N — One puja can have multiple pandits available
BOOKING → PANDIT	N : 1 — Multiple bookings can be assigned to one pandit
PANDIT → BOOKING	1 : N — One pandit can handle multiple bookings
BOOKING → PUJA	N : 1 — Each booking is for one specific puja
PUJA → BOOKING	1 : N — One puja can be part of multiple bookings
BOOKING → DATABASE	N : 1 — Multiple bookings are stored in one database

CHAPTER 6

RESULT AND APPLICATION

6.1 Result:

- **User Select Page :**

Fig 6.1 User Selection Page

The Login page of Purohit Mitra allows users to access the system by selecting their role. It provides two main options: Pandit Login and User Login. Instead of a traditional form, the system uses a simple role-based entry point where users choose whether they are a pandit or a normal user. The left panel highlights the platform branding and login options, while the right panel displays a spiritual message (shloka) to create a devotional and calming user experience.

Table 6.1 User Selection page Screen Element-wise Explanation

UI Element / Section	Explanation
Left Panel — Logo & Branding	Displays “Purohit Mitra” logo with tagline “Your Spiritual Partner” to establish identity.
Left Panel — Background	Shows a blurred puja/ritual image to create a spiritual theme.
Login Heading	Indicates that the user is on the login/entry page.
I am Pandit Button	Allows pandits to login into their dashboard and manage puja services.
I am User Button	Allows normal users to login and book pandit services.

OR Divider	Separates the two login role options visually.
Button Design	Attractive gradient buttons for better UI/UX and easy selection.
Right Panel — Shloka Section	Displays a Sanskrit shloka to give a religious and cultural feel.
Right Panel — Background Design	Decorative mandala-style design enhancing visual appeal.

- **User Signup :**

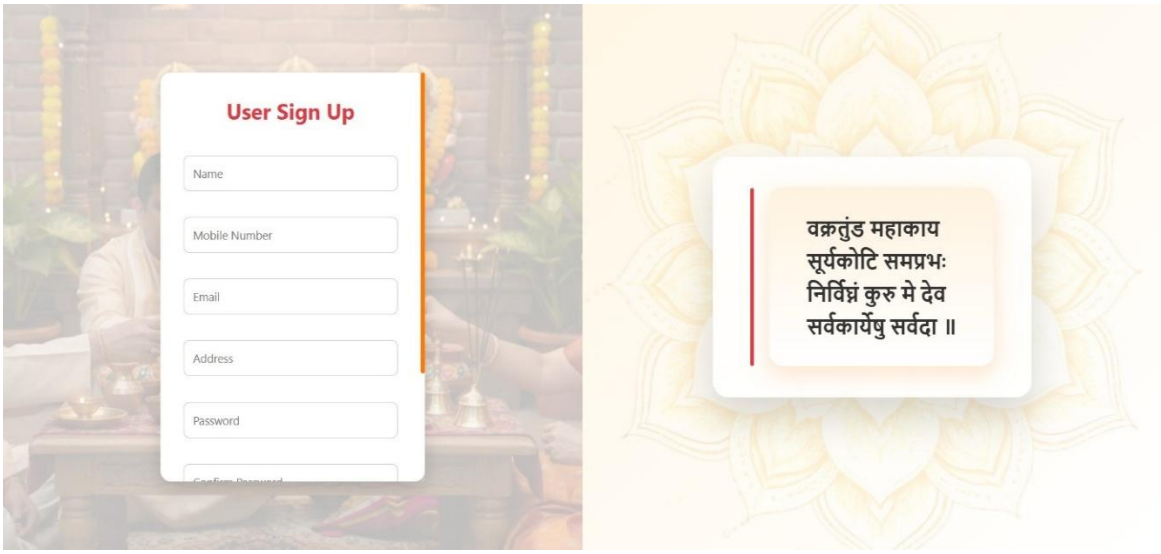

Fig 6.2 User Signup Page

The User Sign Up page of Purohit Mitra allows new users to create an account on the platform. Users need to enter their personal details such as name, mobile number, email, address, and password.

The page is divided into two sections:

1. The left panel focuses on user registration with a clean and simple form.
2. The right panel enhances the experience by displaying a spiritual shloka and decorative design.

This combination ensures both functionality (registration) and emotional connection (spiritual feel), making the platform more engaging and culturally relevant.

Table 6.2 Signup page (User) screen Element-wise Explanation

UI Element / Section	Explanation
Left Panel — Sign Up Form	Displays the User Sign Up form where new users can register by entering their details.
Input Fields	Includes fields like Name, Mobile Number, Email, Address, Password, and Confirm Password. These collect essential user information for account creation.
Form Design	Clean and minimal card-style layout with soft shadows and rounded corners for better user experience.
Background (Left Panel)	Blurred puja/ritual image to maintain the spiritual theme while keeping focus on the form.
Right Panel — Shloka Section	Displays a Sanskrit shloka to create a devotional and calming environment.
Right Panel — Design	Mandala-style decorative background enhances the traditional and cultural look.
Color Theme	Soft spiritual tones (cream, orange, white) give a peaceful and religious feel.

Table: 6.3 APIs Called on this Screen

Method	Endpoint	Purpose	Body / Params
POST	/api/auth/register	Register new user	*name, email, password, role*
POST	/api/auth/login	Login, returns JWT token	*email, password*
POST	/api/auth/logout	Logout, sets Inactive status	*userId*
GET	/api/auth/users	Get all users (Admin only)	-

- **User login :**

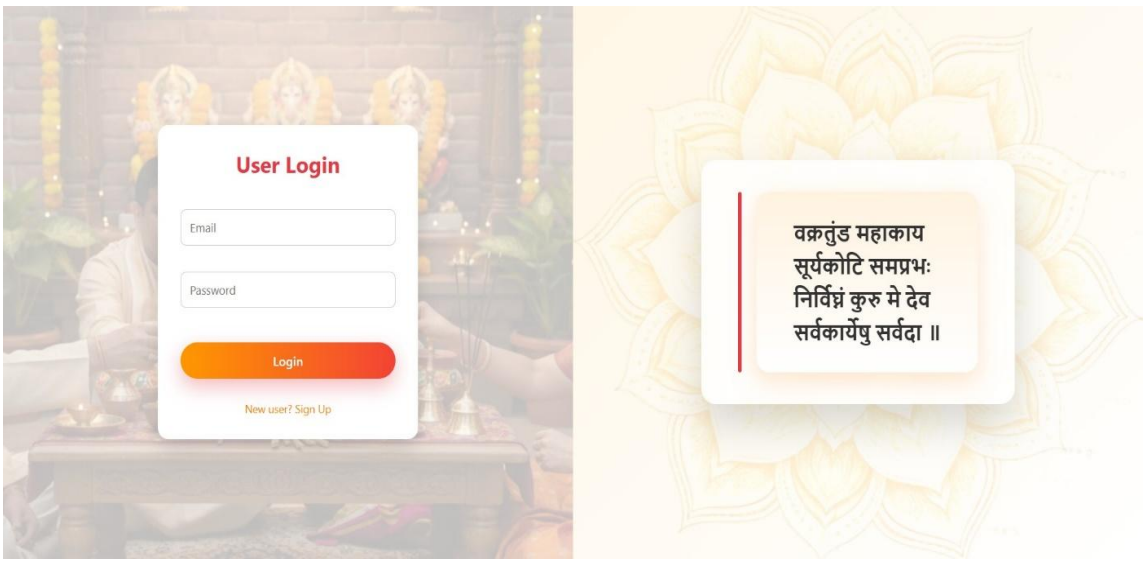

Fig 6.3 User Login Page

The User Login page of Purohit Mitra allows existing users to securely access their accounts by entering their email and password.

The interface is divided into two sections:

1. The left panel focuses on functionality, providing a simple and user-friendly login form.
2. The right panel enhances the user experience by displaying a spiritual shloka and decorative design, creating a calm and culturally connected environment.

Additionally, new users can easily navigate to the Sign Up page using the provided link.

Table 6.4 Login page (User) screen Element-wise Explanation

UI Element / Section	Explanation
Left Panel — Login Form	Displays the User Login form where existing users can enter their credentials to access the system.
Input Fields	Includes Email and Password fields to authenticate the user.
Login Button	A gradient styled button that allows users to submit their login details and proceed to their dashboard.
Sign Up Link	“New user? Sign Up” link redirects users to the registration page if they don’t have an account.

Form Design	Clean card-style layout with rounded corners and shadow effects for a modern and user-friendly interface.
Background (Left Panel)	Blurred puja/ritual image to maintain the spiritual theme while keeping focus on the login form.
Right Panel — Shloka Section	Displays a Sanskrit shloka to create a calm and devotional atmosphere.
Right Panel — Design	Mandala-style background enhances the traditional and cultural appearance of the page.
Color Theme	Soft tones like cream, orange, and white provide a peaceful and visually appealing experience.

Table: 6.5 APIs Called on this Screen

Method	Endpoint	Purpose	Body / Params
POST	/api/auth/login	Authenticate user and return JWT token	*email, password*
POST	/api/auth/logout	Logout user and update status	*userId*
GET	/api/auth/profile	Get logged-in user details	*token (in header)*
PUT	/api/auth/update-profile	Update user profile details	name, mobile, address

- **Pandit Signup :**

Fig 6.4 Pandit Signup first Page

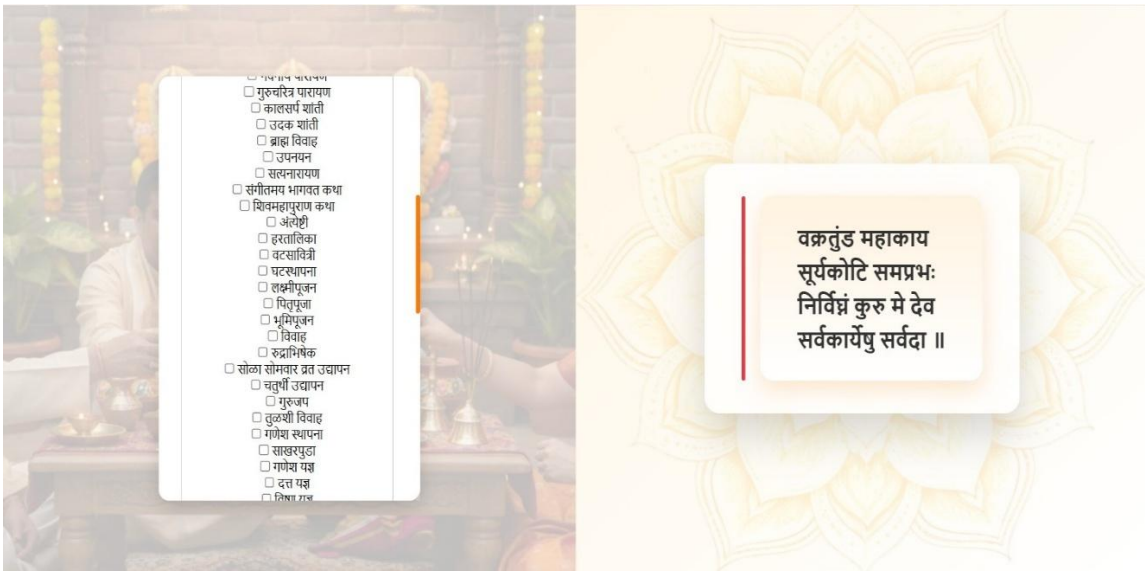

Fig 6.5 Pandit Signup second Page

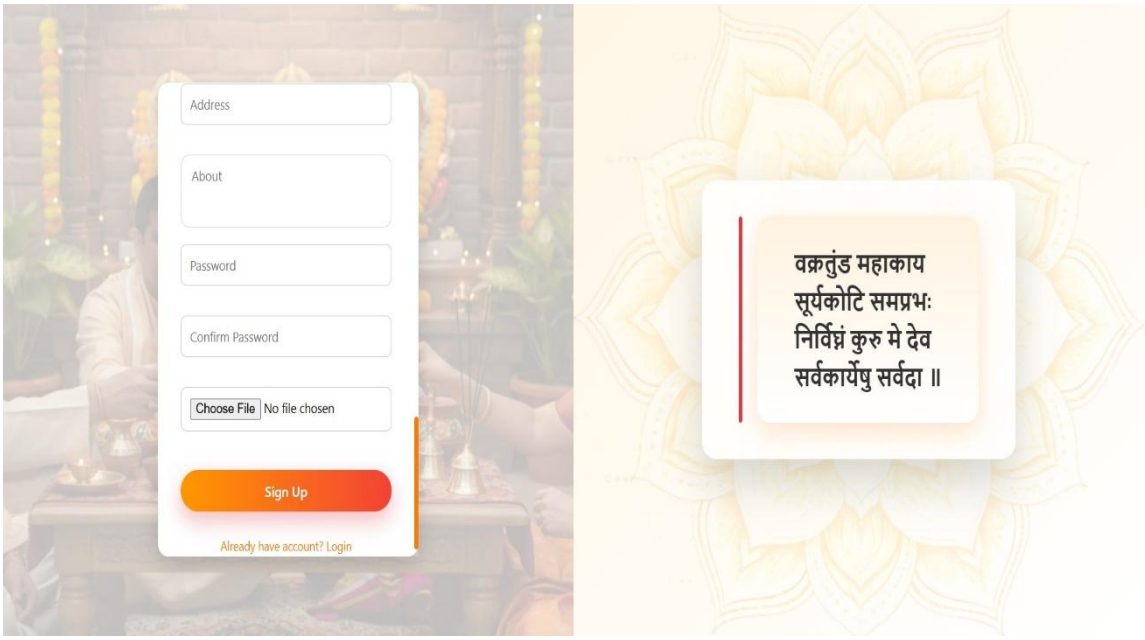

Fig 6.6 Pandit Signup third Page

The Pandit Signup page in Purohit Mitra is a single, scrollable registration form designed to collect both personal and professional details of the pandit.Due to a large number of fields (especially specialization options), the form appears in multiple screenshots, but it is actually one continuous page.

The pandit enters basic details like name, mobile number, and email, along with professional information such as experience and specialization (types of pujas). The specialization section includes multiple selectable options, allowing pandits to choose the services they offer.The left panel focuses on data entry, while the right panel displays a spiritual shloka with mandala design, creating a calm and devotional environment. This improves both usability and visual appeal.

Table 6.6 Signup page (Pandit) screen Element-wise Explanation

UI Element / Section	Explanation
Sign Up Heading	Displays the User Sign Up form where new users can register by entering their details.
Input Fields	Includes fields like Name, Mobile Number, Email, Address, Password, and Confirm Password. These collect essential user information for account creation.
Specialization Section	Clean and minimal card-style layout with soft shadows and rounded corners for better user experience.
Scrollable Form	Blurred puja/ritual image to maintain the spiritual theme while keeping focus on the form.
Checkbox Inputs	Displays a Sanskrit shloka to create a devotional and calming environment.
Form Design	Mandala-style decorative background enhances the traditional and cultural look.
Background (Left Panel)	Blurred puja/ritual image to maintain spiritual theme.
Right Panel — Shloka Section	Displays Sanskrit shloka for devotional feel.
Right Panel — Design	Mandala-style background enhances traditional look.
Color Theme	Soft tones like cream, orange, and white for peaceful UI.

Table: 6.7 APIs Called on this Screen

Method	Endpoint	Purpose	Body / Params
POST	/api/pandit/register	Register pandit with all details	*name, email, mobile, experience, specialization[]*
GET	/api/pandit/specializations	Fetch list of available pujas/services	
POST	/api/pandit/save-progress	Save form data temporarily (optional)	*form data*
POST	/api/auth/login	Login after successful registration	*email, password*

- **Pandit login :**

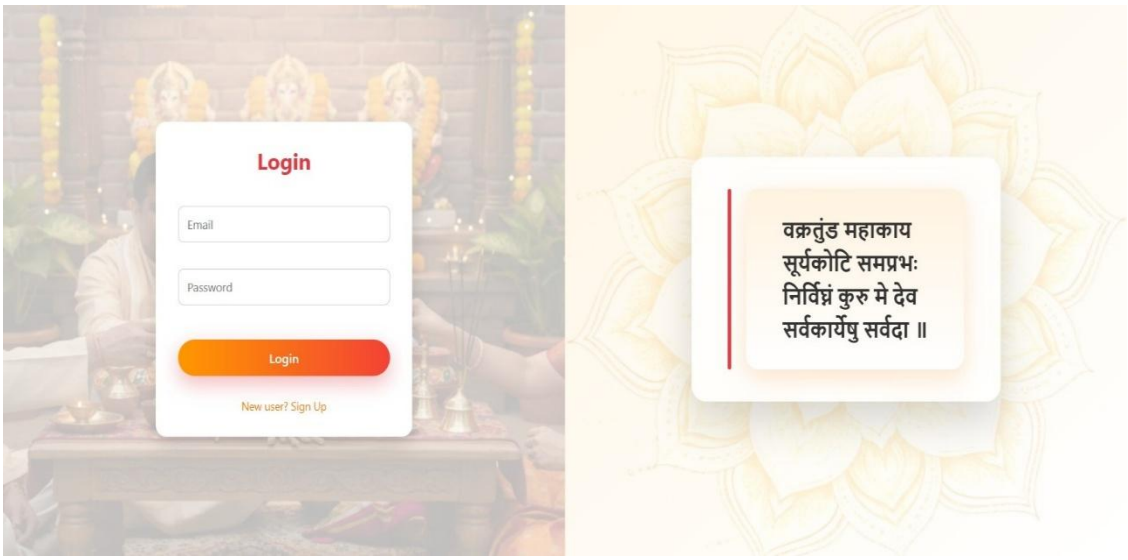

Fig 6.7 Pandit Login Page

This page is a Pandit Login interface that allows registered pandits to securely access the system. On the left side, a login form is provided where pandits can enter their email and password. After entering valid credentials, clicking the Login button authenticates the user and redirects them to their dashboard. If a pandit is new, they can use the "New user? Sign Up" link to register.

The login form is presented in a clean card-style design with soft shadows and a blurred background of a puja scene, maintaining a spiritual theme while keeping the focus on the form. On the right side, a Sanskrit shloka is displayed along with a mandala-inspired design, creating a peaceful and devotional atmosphere. The color palette (cream, orange, and white) enhances the traditional and calming user experience. Behind the scenes, the system uses APIs to authenticate the pandit, manage session login, and retrieve profile details.

Table 6.8 Login page (Pandit) screen Element-wise Explanation

UI Element / Section	Explanation
Left Panel — Login Form	Displays the Pandit Login form where registered pandits can enter their credentials to access the system.
Input Fields	Includes Email and Password fields to authenticate the user.

Login Button	A gradient-styled button that allows pandits to submit their login details and proceed to their dashboard.
Sign Up Link	"New user? Sign Up" link redirects new pandits to the registration page.
Form Design	Card-style layout with rounded corners and shadow effects for a modern and user-friendly interface.
Background (Left Panel)	Blurred puja/ritual image that maintains a spiritual theme while keeping focus on the login form.
Right Panel — Shloka Section	Displays a Sanskrit shloka to create a calm and devotional atmosphere.
Right Panel — Design	Mandala-style background enhances the traditional and cultural appearance of the page.
Color Theme	Soft tones like cream, orange, and white provide a peaceful and visually appealing experience.

Table: 6.9 APIs Called on this Screen

Method	Endpoint	Purpose	Body / Params
POST	/api/auth/login	Authenticate Pandit and return JWT token	*email, password*
POST	/api/auth/logout	Logout pandit and update status	*userId*
GET	/api/auth/profile	Get logged-in pandit details	*token (in header)*
PUT	/api/auth/update-profile	Update pandit profile details	*name, mobile, address*

- **Home Page:**

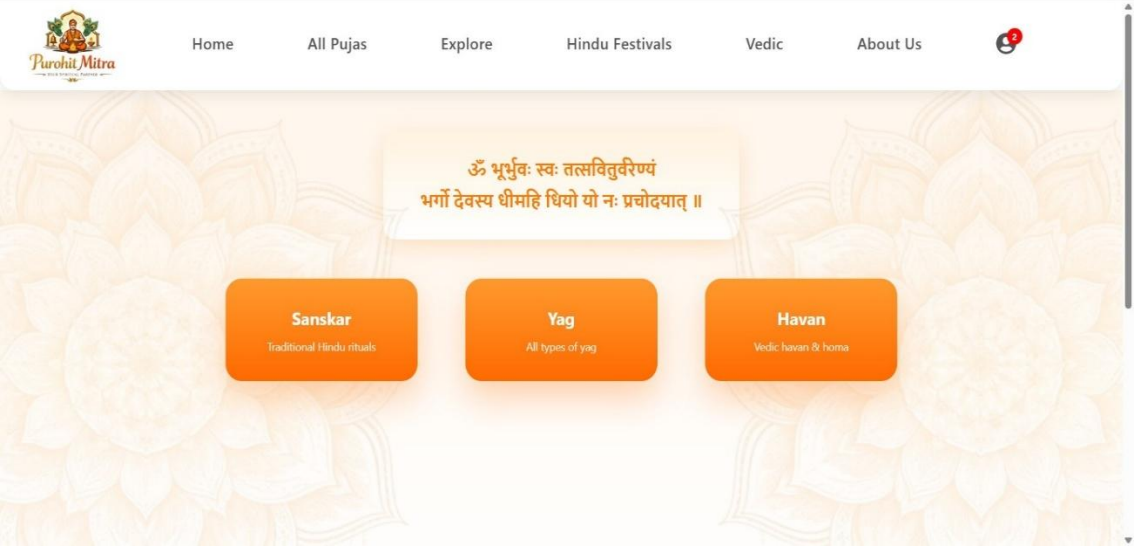

Fig 6.8 Home Page

This section displays a Sanskrit shloka (Gayatri Mantra) at the center, creating a calm and spiritual atmosphere for the user. The mandala-style background and soft color tones enhance the traditional and devotional look of the interface. This screen acts as a visual/branding element, improving user experience by adding a peaceful and culturally rich feel to the application.

Table 6.10 Home Page screen Element-wise Explanation

UI Element / Section	Explanation
Shloka Text (Center)	Displays a Sanskrit shloka (Gayatri Mantra) to create a calm and spiritual environment for the user.
Text Card Design	The shloka is placed inside a soft card with rounded corners and shadow, making it visually appealing and easy to read.
Background Design	Mandala-style pattern enhances the traditional and cultural look of the page.
Illustration (Top/Bottom)	Decorative spiritual artwork (hands/puja elements) adds a vibrant and engaging visual appeal.
Color Theme	Warm colors like cream, orange, and beige create a peaceful and devotional user experience.
Purpose of Section	Acts as a branding and emotional engagement element rather than a functional input screen.

- **Explore Page (Main) :**

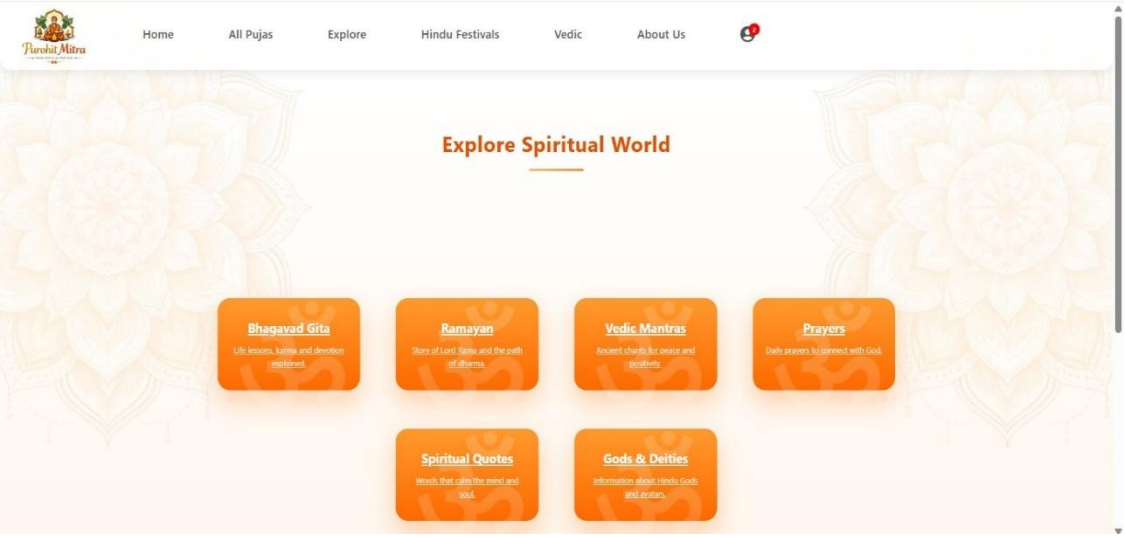

Fig 6.9 explore Page

This page is an Explore section where users can browse different types of Hindu rituals and services such as Sanskar, Yag, and Havan. At the top, a Sanskrit shloka is displayed to create a peaceful and spiritual atmosphere. Below it, interactive cards/buttons are provided for each category. When the user clicks on any option, they are redirected to a detailed page where they can explore or book that specific service. The page uses a mandala-style background and warm color theme, enhancing the traditional and devotional feel while making navigation simple and engaging.

Table 6.11 Explore page screen Element-wise Explanation

UI Element / Section	Explanation
Bottom Navigation Bar	Displays a Sanskrit shloka (Gayatri Mantra) to create a calm and spiritual environment for the user.
Home Icon	The shloka is placed inside a soft card with rounded corners and shadow, making it visually appealing and easy to read.
Card Title & Description	Mandala-style pattern enhances the traditional and cultural look of the page.
Clickable Cards / Navigation	Decorative spiritual artwork (hands/puja elements) adds a vibrant and engaging visual appeal.
Card Design	Warm colors like cream, orange, and beige create a peaceful and devotional user experience.

Background Design	Acts as a branding and emotional engagement element rather than a functional input screen.
Illustrations / Graphics	Decorative spiritual elements improve visual engagement and theme consistency.
Layout Structure	Well-aligned horizontal layout for easy browsing and smooth user experience.
Color Theme	Warm tones like orange, cream, and white create a calm and devotional feel.

- **Explore Page (Bhagvad Gita) :**

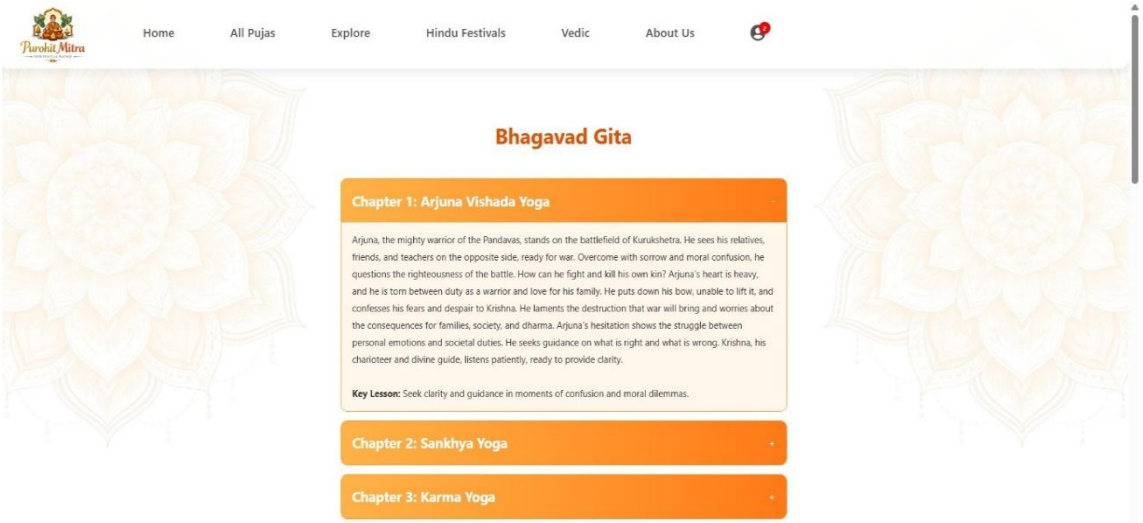

Fig 6.10 explore Page (Bhagvad Gita)

This page represents the Bhagavad Gita section of the application where users can explore spiritual content related to the Gita. It provides users with access to chapters, verses (shlokas), and their meanings, helping them read and understand the teachings of the Bhagavad Gita. The page is designed with a simple and spiritual theme, allowing users to focus on reading without distractions. The interface may include options to browse chapters, select specific verses, or view explanations, making it easy for users to navigate and gain knowledge.

Table 6.12 Explore page (Bhagvad Gita) screen Element-wise Explanation

UI Element / Section	Explanation
Header / Title Section	Displays the title “Bhagavad Gita” indicating the current section.

Chapter List / Section	Shows a list of chapters (Adhyay) available in the Bhagavad Gita.
Shloka / Verse Display	Displays individual verses (shlokas) from the selected chapter.
Meaning / Explanation Section	Provides translation or explanation of each shloka for better understanding.
Navigation Options	Allows users to move between chapters or verses easily.
Scroll View Layout	Enables smooth scrolling to read long content.
Background Design	Spiritual-themed background to maintain devotional feel.
Typography / Font Style	Clear and readable fonts for Sanskrit and translated text.
Color Theme	Soft and warm color for a calm reading experience.

- **Explore Page (Ramayan) :**

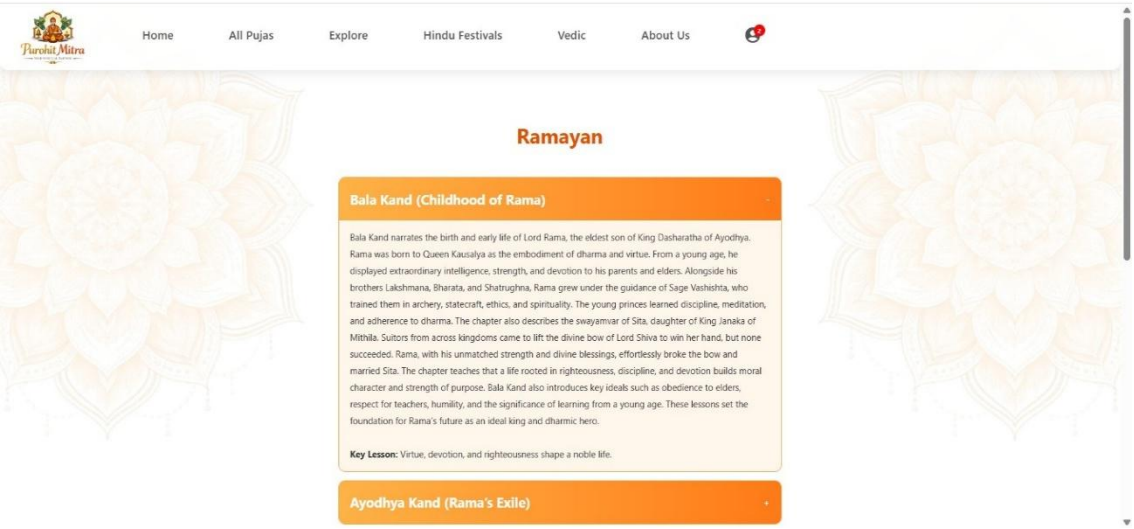

Fig 6.11 explore Page (Ramayan)

This page represents the Bhagavad Gita section of the application where users can explore spiritual content related to the Gita. It provides users with access to chapters, verses (shlokas), and their meanings, helping them read and understand the teachings of the Bhagavad Gita. The page is designed with a simple and spiritual theme, allowing users to focus on reading without distractions. The interface may include options to browse chapters, select specific verses, or view explanations, making it easy for users to navigate and gain knowledge.

Table 6.13 Explore page (Ramayan) screen Element-wise Explanation

UI Element / Section	Explanation
Header / Title Section	Displays the title “Ramayan” indicating the current section.
Chapter List / Section	Shows a list of chapters (Khand) available in the Bhagavad Gita.
Shloka / Verse Display	Displays individual verses (shlokas) from the selected chapter.
Meaning / Explanation Section	Provides translation or explanation of each shloka for better understanding.
Navigation Options	Allows users to move between chapters or verses easily.
Scroll View Layout	Enables smooth scrolling to read long content.
Background Design	Spiritual-themed background to maintain devotional feel.
Typography / Font Style	Clear and readable fonts for Sanskrit and translated text.
Color Theme	Soft and warm color for a calm reading experience.

- **Explore Page (Vedic Mantra) :**

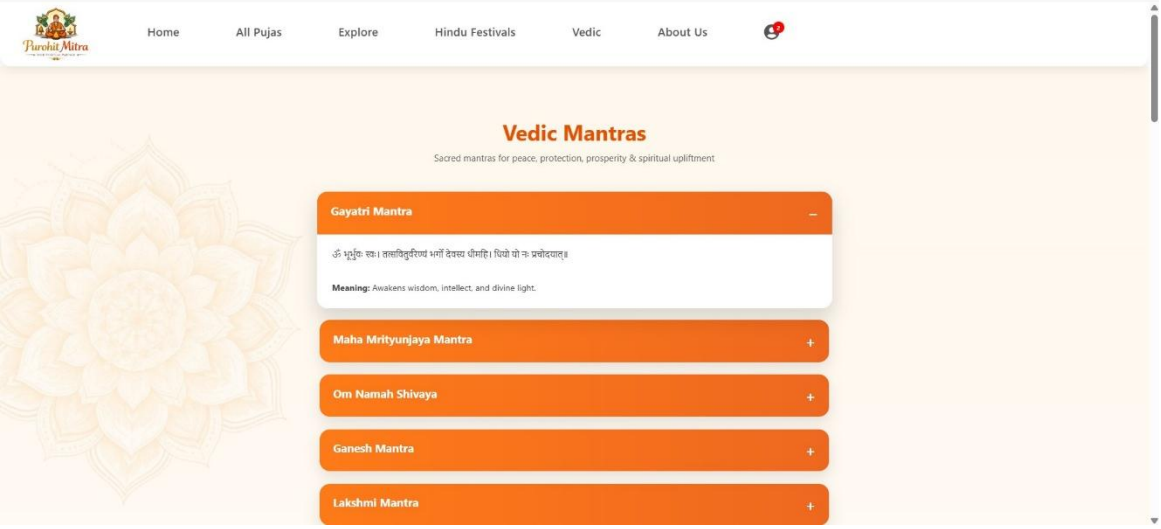

Fig 6.12 explore Page (Vedic Mantra)

This page displays a collection of Vedic mantras that users can explore for spiritual growth and understanding. At the top, the title “Vedic Mantras” introduces the section along with a short description. Below it, multiple mantra

cards are shown such as Gayatri Mantra, Maha Mrityunjaya Mantra, Om Namah Shivaya, etc.

Each mantra is presented in an expandable/collapsible format (accordion style). When a user clicks on a mantra, it expands to show the Sanskrit text and its meaning, helping users understand the spiritual significance. The design uses a clean layout, soft colors, and traditional background to create a calm and devotional reading experience.

Table 6.14 Explore page (Vedic Mantra) screen Element-wise Explanation

UI Element / Section	Explanation
Header / Title Section	Displays the title “Vedic Mantras” along with a short description of the section.
Mantra List	Shows a list of different mantras available for users to explore.
Mantra Cards	Each mantra is displayed inside a card for better organization and readability.
Accordion (Expand/Collapse)	Allows users to expand a mantra to view details and collapse it to save space.
Mantra Text (Sanskrit)	Displays the original Sanskrit mantra when expanded.
Meaning Section	Provides the translation or meaning of the mantra for better understanding.
Expand/Collapse Icons (+ / -)	Indicates whether the card can be opened or closed.
Card Design	Rounded cards with gradient orange color and shadow effects for modern UI.
Background Design	Mandala-style background enhances traditional and spiritual feel.
Layout Structure	Vertical list layout for easy scrolling and navigation.
Color Theme	Warm tones like orange, cream, and white create a peaceful user experience.

- **Explore Page (Prayers) :**

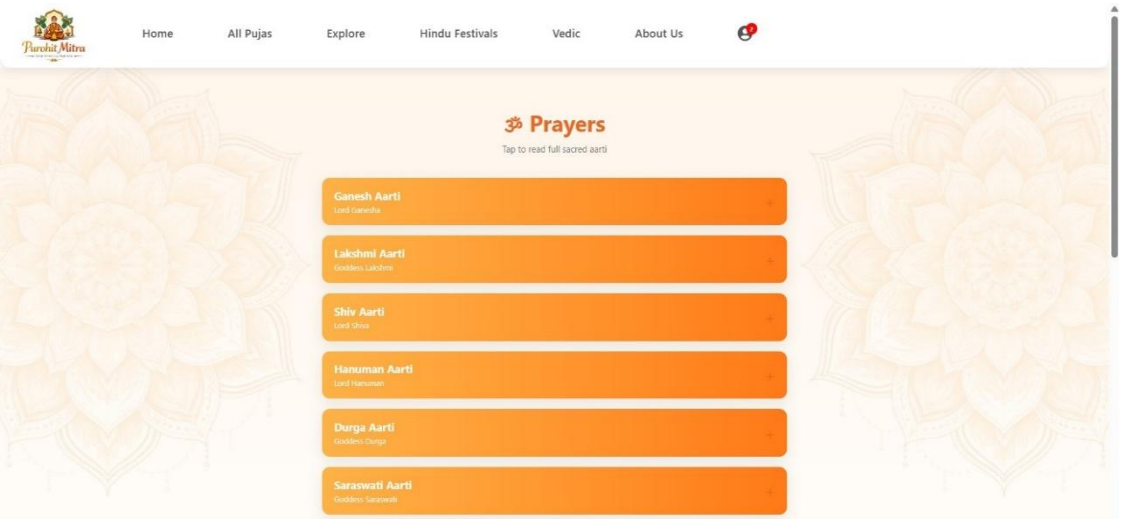

Fig 6.13 explore Page (Prayers)

This page displays a collection of Aartis (Prayers) dedicated to different Hindu deities. At the top, the title "Prayers" introduces the section along with a short instruction. Below it, a list of Aarti cards is shown such as Ganesh Aarti, Lakshmi Aarti, Shiv Aarti, Hanuman Aarti, Durga Aarti, and Saraswati Aarti.

Each item is presented in a card format, and users can click on any Aarti to view the full prayer content on the next screen. The page follows a simple vertical layout with a spiritual background and warm colors, providing a calm and devotional user experience.

Table 6.15 Explore page (Prayers) screen Element-wise Explanation

UI Element / Section	Explanation
Header / Title Section	Displays the title "Prayers" along with a short instruction for users.
Aarti List	Shows a list of different Aartis available for users to explore.
Aarti Cards	Each prayer is displayed inside a card for clear organization.
Card Title & Subtitle	Displays the name of the deity (e.g., Ganesh, Lakshmi) and related prayer.
Clickable Cards / Navigation	Clicking on a card redirects the user to the detailed/full Aarti page.
Arrow/Icon Indicator	Indicates that the card is clickable and leads to another screen.

Card Design	Rounded cards with gradient orange color and shadow effects for modern UI.
Background Design	Mandala-style background enhances traditional and devotional feel.
Layout Structure	Vertical scrolling layout for easy navigation through multiple prayers.
Color Theme	Warm tones like orange, cream, and white create a peaceful experience.

- **Explore Page (Spiritual Quotes) :**

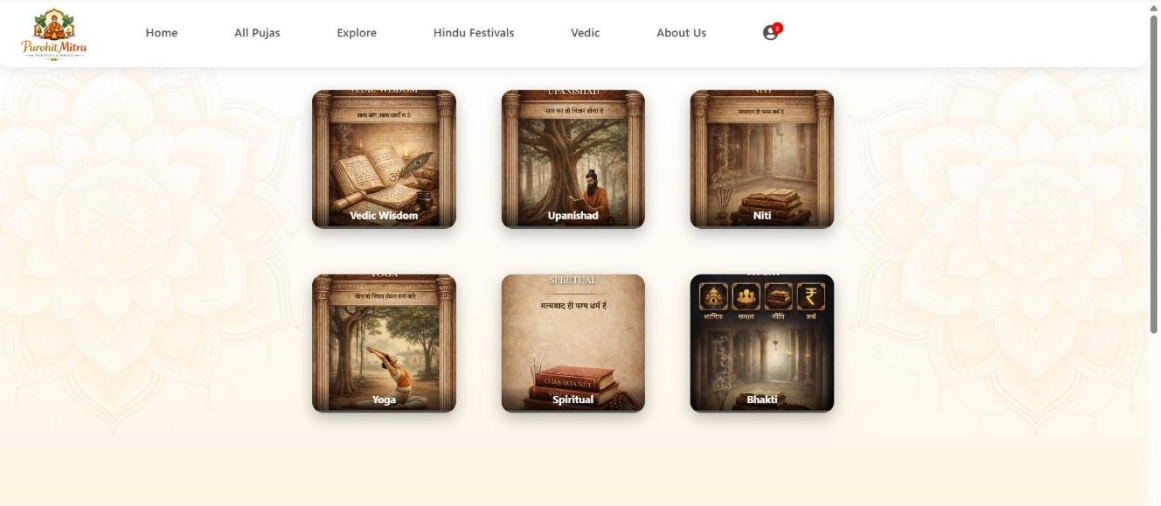

Fig 6.14 explore Page (Spiritual quote)

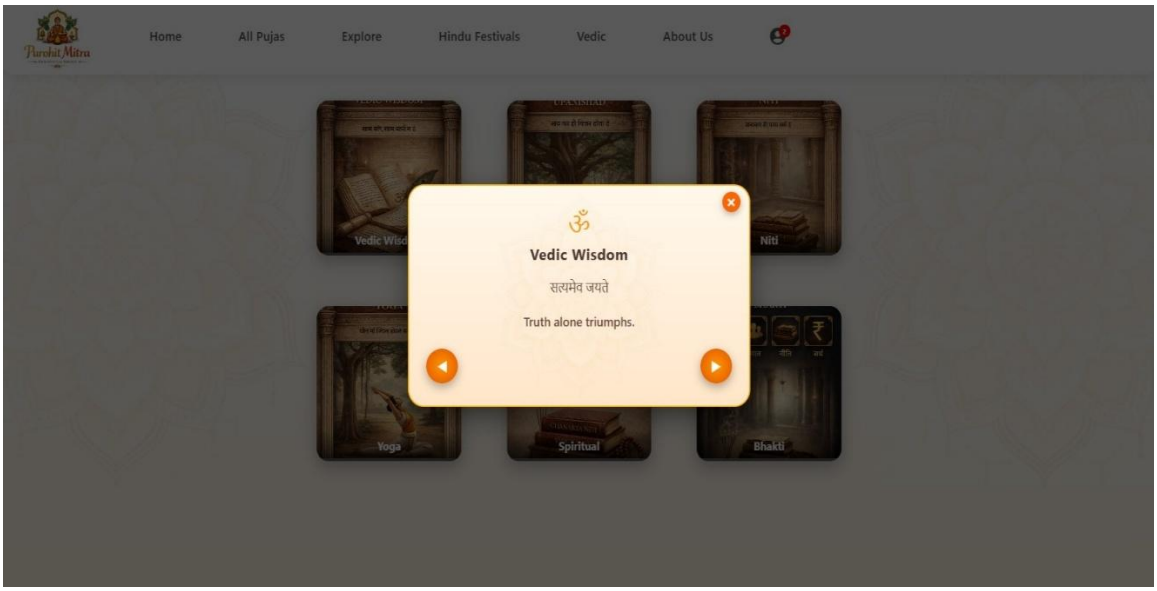

Fig 6.15 Spiritual Quote Detail

This page displays different spiritual categories from which users can explore meaningful quotes and teachings. The screen shows multiple category cards such as Vedic Wisdom, Upanishad, Niti, Yoga, Spiritual, and Bhakti. Each card represents a specific type of spiritual knowledge or philosophy.

Users can click on any card to explore quotes or content related to that category.

Table 6.16 Explore page (Spiritual quote) screen Element-wise Explanation

UI Element / Section	Explanation
Category Cards	Displays different categories like Vedic Wisdom, Upanishad, Niti, Yoga, Spiritual, and Bhakti.
Card Images	Each card contains an image representing the spiritual theme of that category.
Card Title	Shows the name of the category clearly on each card.
Clickable Cards / Navigation	Clicking on a card redirects the user to quotes or content related to that category.
Grid Layout	Cards are arranged in a grid format for better visual structure and easy browsing.
Card Design	Square cards with rounded corners, shadow effects, and aesthetic visuals.
Background Design	Mandala-style background enhances the traditional and devotional appearance.
Illustrations / Artwork	Spiritual-themed images improve user engagement and visual appeal.
Layout Structure	Balanced spacing and alignment for a clean UI experience.
Color Theme	Warm tones like brown, cream, and orange create a calm and spiritual feel.

- **Explore Page (God and Deities) :**

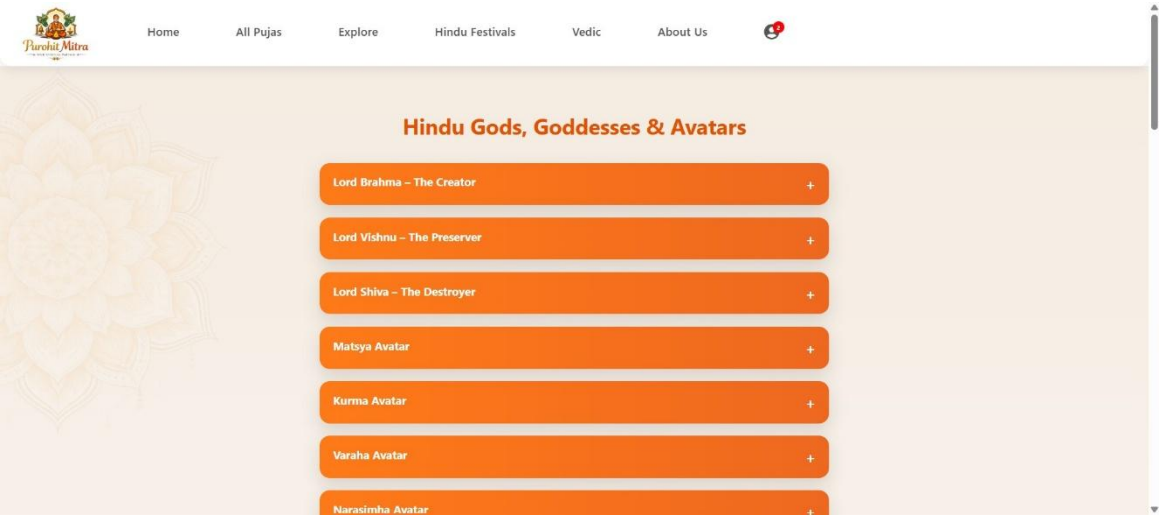

Fig 6.16 explore Page (God and Deities)

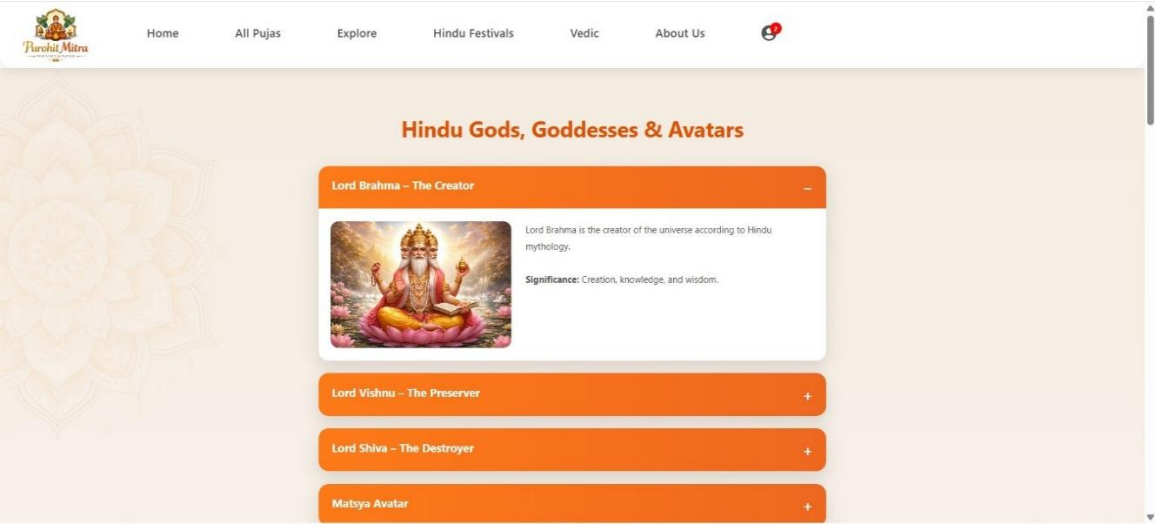

Fig 6.17 God and Deities Detail Sample

This page displays information about Hindu Gods, Goddesses, and Avatars in a structured and interactive way. At the top, the title "Hindu Gods, Goddesses & Avatars" introduces the section. Below it, a list of deity cards is shown such as Lord Brahma, Lord Vishnu, Lord Shiva, Matsya Avatar, Kurma Avatar, etc.

Each item is presented in an accordion format (expand/collapse). When a user clicks on a deity (e.g., Lord Brahma), the card expands to show detailed information, image, and significance. This allows users to explore spiritual knowledge in an organized and user-friendly way.

Table 6.17 Explore page (God and Deities) screen Element-wise Explanation

UI Element / Section	Explanation
Header / Title Section	Displays the title "Hindu Gods, Goddesses & Avatars".
Deity List	Shows a list of gods, goddesses, and avatars available for exploration.
Deity Cards	Each deity is represented inside a card for structured presentation.
Accordion (Expand/Collapse)	Allows users to expand a card to view detailed information and collapse it to save space.
Deity Name & Role	Displays name and role (e.g., Creator, Preserver, Destroyer).
Deity Image	Shows an image of the selected deity when the card is expanded.

Description Section	Provides details about the deity and their importance in Hindu mythology.
Significance Text	Highlights key significance (e.g., creation, knowledge, power).
Expand/Collapse Icon (+ / -)	Indicates whether the card is open or closed.
Card Design	Rounded cards with gradient orange color and shadow effects for modern UI.
Background Design	Mandala-style background enhances traditional and devotional feel.
Layout Structure	Vertical scrolling layout for easy navigation through multiple deities.
Color Theme	Warm tones like orange, cream, and white create a calm and spiritual experience.

- **Hindu Festival :**

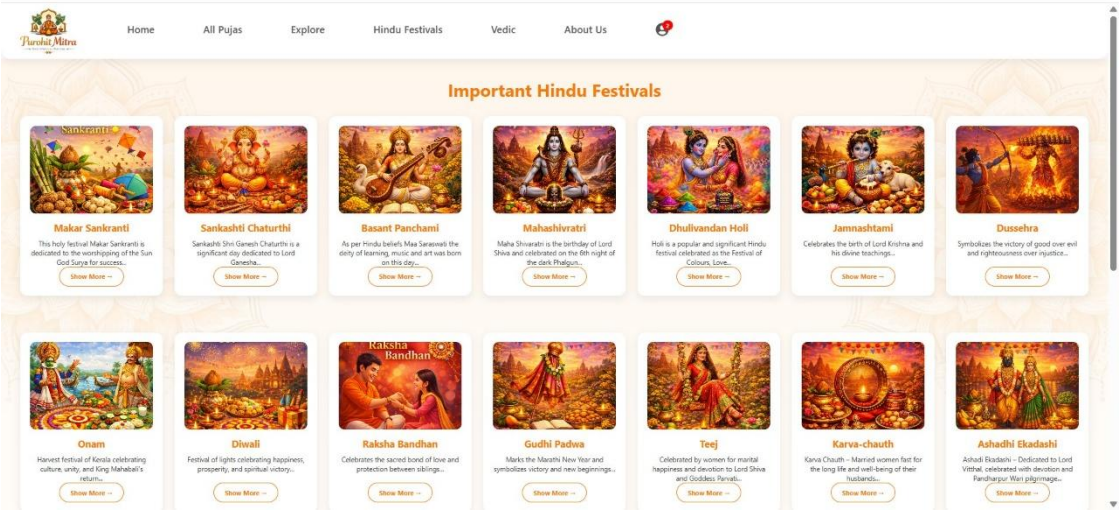

Fig 6.18 Hindu Festivals

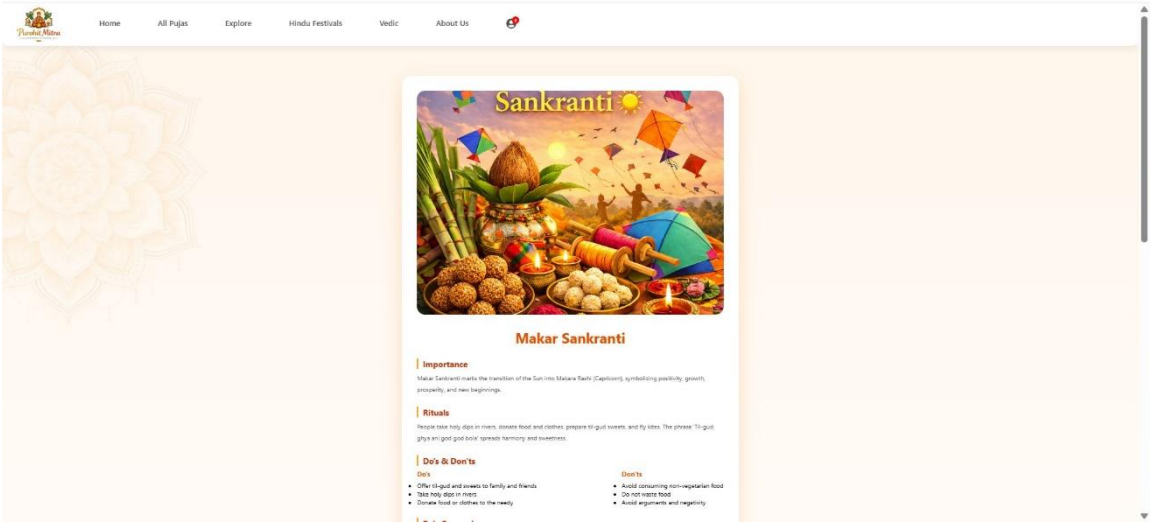

Fig 6.19 Hindu Festivals (Makar Sankranti) Detail Sample

This page displays a collection of important Hindu festivals in a visually rich and organized way. Users can see multiple festival cards such as Makar Sankranti, Ganesh Chaturthi, Basant Panchami, Mahashivratri, Holi, Janmashtami, Dussehra, Diwali, etc. Each card includes an image, festival name, short description, and a “Show More” button. When the user clicks on “Show More”, they are redirected to a detailed page of that festival, where they can learn about its importance, rituals, and traditions.

Table 6.18 Hindu Festivals screen Element-wise Explanation

UI Element / Section	Explanation
Header / Title Section	Displays the title “Important Hindu Festivals”.
Festival Cards	Shows different festivals in card format for easy browsing
Festival Image	Each card contains a colorful image representing the festival.
Festival Name	Displays the name of the festival(e.g., Diwali, Holi).
Short Description	Brief information about the festival. Brief information about the festival.
Show More Button	Allows users to navigate to the detailed festival page.
Grid Layout	Cards are arranged in a grid format for better visual structure.
Card Design	Rounded cards with shadow effects for modern UI.
Background Design	Mandala-style background enhances traditional look.
Color Theme	Bright and warm colors to reflect festive and cultural vibes.

Table 6.19 Hindu Festivals (Makar Sankranti) screen Element-wise Explanation

UI Element / Section	Explanation
Festival Image (Top Banner)	Mandala-style background enhances traditional look.
Festival Title	Mandala-style background enhances traditional look.
Importance Section	Explains the significance of the festival.
Rituals Section	Describes the traditional rituals and practices followed.
Do’s & Don’ts Section	Provides guidelines on what to do and avoid during the festival.
Content Layout	Structured sections with headings for better readability.
Card/Container Design	Content is placed inside a card with rounded corners and shadow.
Scroll View Layout	Allows users to scroll through detailed information.
Background Design	Traditional mandala background enhances cultural feel.
Color Theme	Warm and festive colors create an engaging experience.

- **Vedic :**

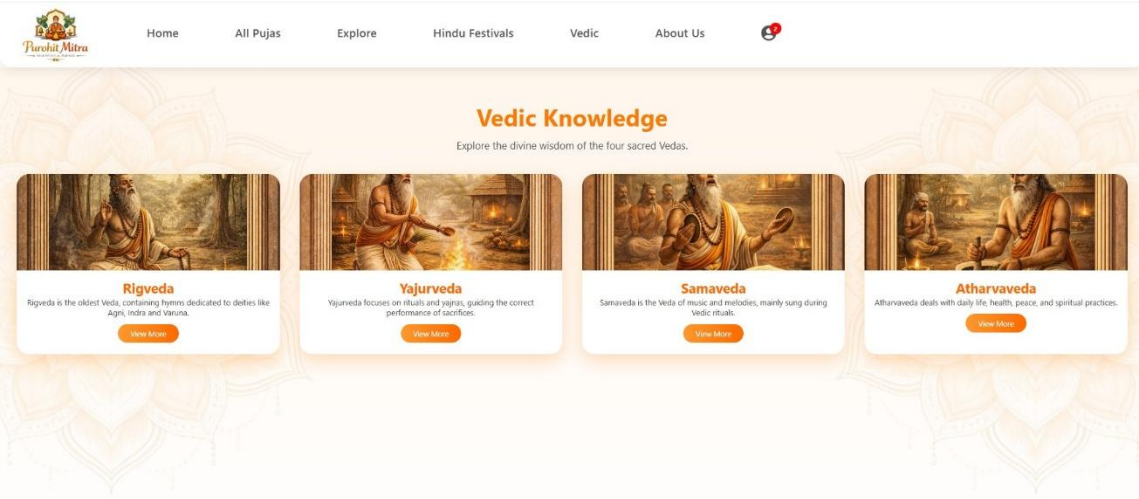

Fig 6.20 Vedic Page

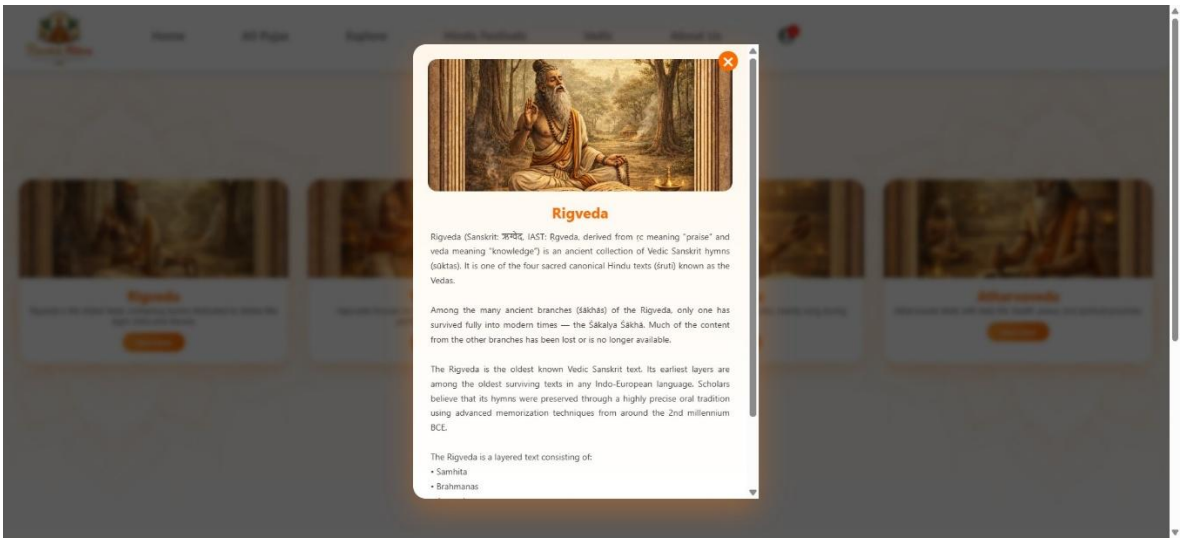

Fig 6.21 Vedic Detail Page

This section allows users to explore Vedic knowledge and scriptures in a structured and informative way. On the Vedic Page, users can view different categories or texts related to Vedas. Each item is displayed in a card format, helping users easily browse available content. When a user selects any item, they are redirected to a detailed page.

On the Vedic Detail Page, detailed information about the selected Vedic text is displayed. It includes descriptions, explanations, and key insights, helping users understand the meaning and importance of Vedic literature. The page is designed with a clean layout, structured content, and spiritual theme for a smooth reading experience.

Table 6.20 Vedic Screen Element-wise Explanation

UI Element / Section	Explanation
Header / Title Section	Displays the title of the Vedic section or selected Vedic text.
Vedic Cards / List	Shows different Vedic categories or texts in a structured format.
Card Design	Each item is displayed inside a card with rounded corners and shadow effects.
Clickable Cards / Navigation	Clicking on a card redirects the user to the detailed Vedic content page.
Detail Content Section	Displays in-depth informaation about the selected Vedic text.
Description / Explanation	Provides detailed explanations and meaning of the Vedic content.
Structured Content Layout	Content is divided into sections with headings for better readability.
Scroll View Layout	Allows users to scroll through lengthy content smoothly.
Background Design	Mandala-style background enhances traditional and spiritual feel.
Typography / Readability	Clean and readable fonts improve user understanding.
Color Theme	Warm tones like cream, orange, and brown create a calm and engaging experience.

- **Profile Pages (Pandit) :**

Fig 6.22 Pandit Profile Page

This page displays the Pandit profile and dashboard, where the pandit can manage personal details and booking requests. On the right side, the profile section shows the pandit's information such as name, photo, contact details, experience, specialization, and address, helping users understand the pandit's background. Below the profile, a booking

requests section is available where users' puja requests are listed with details like user name, address, date, time, and status. The pandit can easily manage these requests using Confirm and Reject buttons. In the center of the page, service categories like Sanskar, Yag, and Havan are displayed in card format, allowing easy access to different services.

Table 6.21 Pandit Profile Screen Element-wise Explanation

UI Element / Section	Explanation
Header / Navbar	Navigation options for different pages
Profile Sidebar	Displays pandit's personal and professional details
Profile Image	Shows pandit's photo
Contact Details	Email and mobile information
Experience & Sperialization	Shows expertise of pandit
Address Section	Displays pandit location
Booking Requests Panel	List of user booking requests
User Booking Card	Shows user details and booking info
Action Buttons	Confirm / Reject booking
Main Content Area	Displays services
Service Cards	Sanskar, Yag, Havan categories
Clickable Cards	Navigate to more details
Spiritual Quote Section	Displays Sanskrit shloka
Card Design	Rounded cards with shadow
Scroll Layout	Allows vertical scrolling
Color Theme	Warm devotional colors

Table: 6.22 APIs Called on this Screen

Method	Endpoint	Purpose	Body / Params
POST	/api/auth/login	Authenticate Pandit and return JWT token	*email, password*
POST	/api/auth/logout	Logout pandit and update status	*userId*

- **All Pujas Page :**

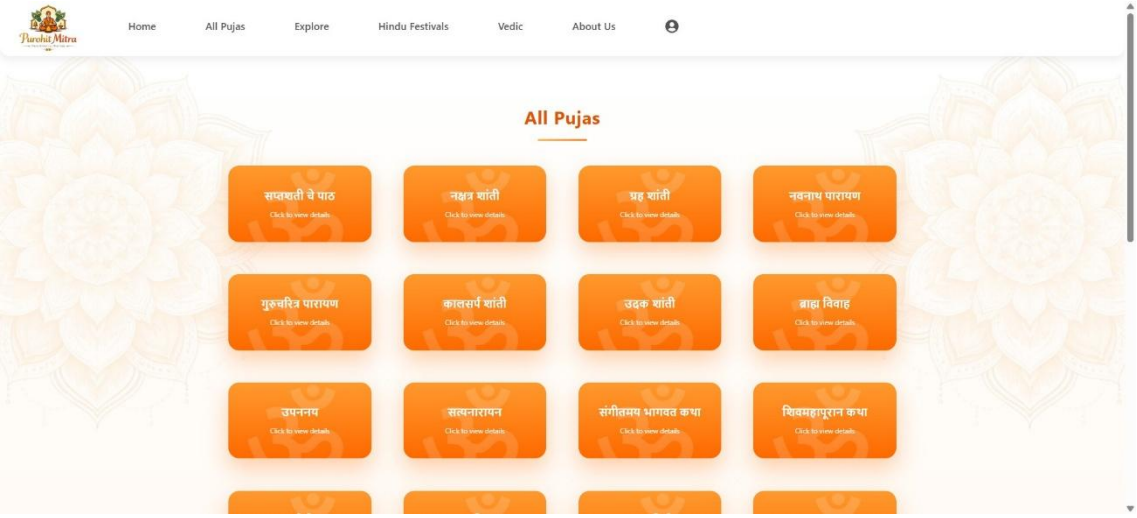

Fig 6.24 All Pujas Page

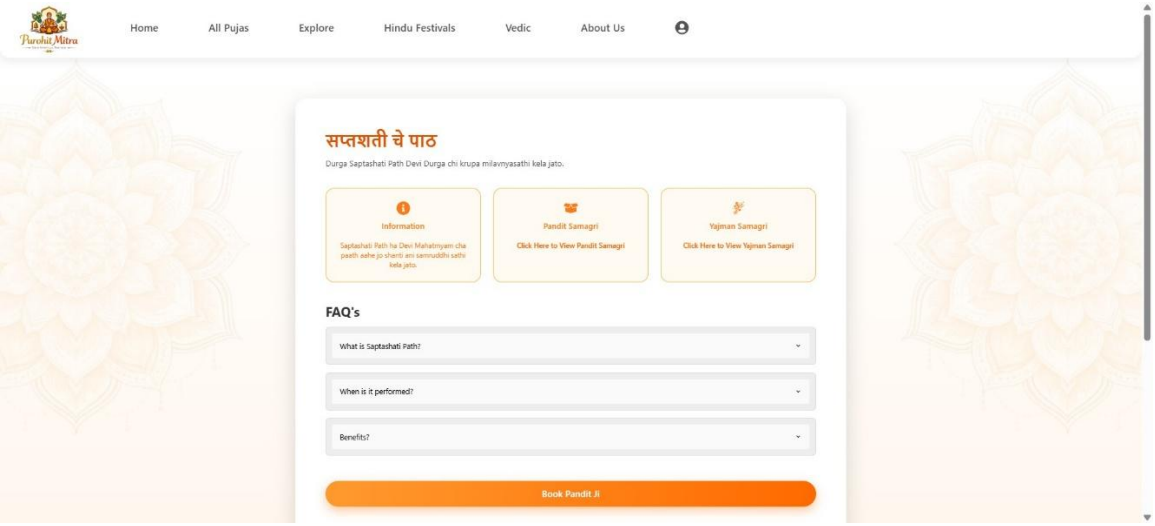

Fig 6.25 All Puja Detail Page (SptaShati Path)

This section shows the "All Pujas" page of the application where users can explore different types of pujas available for booking. The page displays multiple puja cards in a grid layout, each representing a specific ritual like Satyanarayan Puja, Ganesh Puja, and others, with a "Click to view details" option. When a user selects a particular puja, it navigates to a detailed page that provides complete information about that puja, including its significance, required samagri (Pandit Samagri and Yajman Samagri), and additional guidance. Below this, an FAQ section is available in an expandable format to answer common questions such as when the puja is performed and its benefits. At the bottom, a "Book Pandit Ji" button allows users to proceed with booking a pandit for the selected puja, making the overall experience simple, informative, and user-friendly.

Table 6.25 All Pujas Screen Element-wise Explanation

UI Element / Section	Explanation
Header / Navbar	Provides navigation options like Home, All Pujas, Explore, Hindu Festivals, Vedic, and About Us
Page Title	Displays “All Pujas” heading to indicate the current section
Puja Cards Grid	Shows a collection of different pujas in a structured grid layout
Individual Puja Card	Represents a specific puja with its name and a short call-to-action
Clickable Cards	Each card is clickable and redirects user to detailed puja information
Card Label Text	Displays puja name in Marathi/Hindi for cultural relevance
“Click to view details” Text	Guides users to explore more information about the puja
Puja Details Section	Opens after clicking a card, showing complete puja information
Information Card	Provides description and importance of the selected puja
Pandit Samagri Section	Lists items required by the pandit for performing the puja
Yajman Samagri Section	Lists items that the user (yajman) needs to arrange
FAQ Section	Contains commonly asked questions in accordion format
Expandable Questions	Users can click to expand and read answers
Book Pandit Button	Allows users to proceed with booking a pandit for the puja
Scroll Layout	Enables vertical scrolling to view all pujas and details
Background Design	Uses subtle mandala-style spiritual background
Card Design	Rounded cards with shadow for a modern and clean UI
Color Theme	Warm orange and cream tones to create a devotional feel

- **Booking Module Page :**

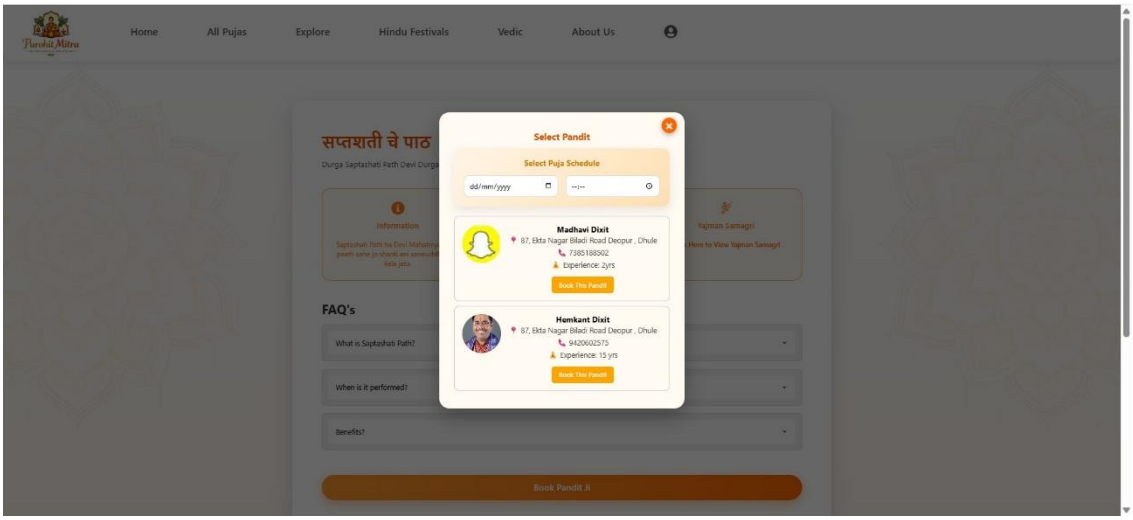

Fig 6.26 Booking Module

This booking page appears when a user clicks on the “Book Pandit Ji” button for a selected puja. A popup modal titled “Select Pandit” is displayed, allowing the user to choose a suitable pandit and schedule the puja. At the top of the modal, users can select their preferred date and time for the ritual. Below that, a list of available pandits is shown, each with their profile details such as name, address, contact number, and years of experience. Each pandit card also includes a “Book This Pandit” button, enabling users to quickly confirm their selection. The background page remains slightly blurred to keep the focus on the booking process, making the experience simple, clear, and user-friendly.

Table 6.26 Booking Module Screen Element-wise Explanation

UI Element / Section	Explanation
Modal Popup	Displays booking interface without leaving the current page
Popup Title	“Select Pandit” heading to indicate booking action
Close Button (X)	Allows user to close the popup
Date Picker	Lets user select preferred booking date

Time Picker	Allows user to choose suitable time slot
Pandit List	Shows available pandits for the selected puja
Pandit Card	Displays individual pandit details
Profile Image	Shows pandit's photo/avatar
Pandit Name	Displays name of the pandit
Address Info	Shows location details of pandit
Contact Number	Displays pandit's mobile number
Experience Info	Shows years of experience
"Book This Pandit" Button	Allows user to select and confirm a pandit
Background Blur	Keeps focus on popup while dimming main page

Table 6.27 APIs Called on this Screen

Method	Endpoint	Purpose	Body / Params
POST	/api/bookings/create	Create a new booking request	*userId, panditId, pujaType, date, time*
GET	/api/bookings/user	Get all bookings of a user	*userId*
GET	/api/bookings/pandit	Get all booking requests for pandit	*panditId*
PUT	/api/bookings/status	Confirm or Reject booking request	*bookingId, status*
GET	/api/bookings/details	Get specific booking details	*bookingId*
DELETE	/api/bookings/cancel	Cancel a booking	*bookingId*

- **DATABASE SCHEMA OVERVIEW:**

  The Purohit Mitra (Online Pandit Booking System) uses MongoDB (NoSQL) with Mongoose ODM to store and manage data. The database is designed in a simple way without using complex IDs, focusing on direct attributes like name,

mobile number, puja details, and booking information. Below are the main collections and their fields.

1. **USER COLLECTION**

Table 6.28 Users Collection

Field	Type	Description
_id	ObjectId	MongoDB auto-generated unique document ID
name	String	Full name of the user
email	String (Unique)	Email address used for login — must be unique across all users
role	Enum	user / pandit
mobile_number	String	Mobile number with +91 country code
Address	String	User address
createdAt	Date	Account creation time

2. **PANDIT COLLECTION**

Table 6.29 Pandit Collection

Field	Type	Description
_id	ObjectId	MongoDB auto-generated unique document ID
name	String	Full name of the user
email	String (Unique)	Email address used for login — must be unique across all pandits
experience	String	Years of experience
rate	Number	Charges for puja
location	String	City / Area
phone	String	Mobile number with +91 country code

specialization	String	Ganpati, Satyanarayan, etc
createdAt	Date	Registration date

3. BOOKINGS COLLECTION

Table 6.30 Bookings Collection

Field	Type	Description
_id	ObjectId	MongoDB auto-generated unique document ID
user_name	String	Full name of the User
pandit_name	String	Full name of the Pandit
puja_name	String	Full name of the Puja
date	Date	Booking Date
time	Time	Booking Time
status	String	Pending / Accepted / Completed
createdAt	String	Booking time

4. PUJA COLLECTION

Table 6.31 Puja Collection

Field	Type	Description
_id	ObjectId	MongoDB auto-generated unique document ID
puja_name	String	Full name of the Puja
user_name	String	Full name of the User
pandit_name	String	Full name of the Pandit
date	Date	Booking Date

time	Time	Booking Time

5. TECHNOLOGIES :

Table 6.32 Used Technologies

Area	Technologies Used
Frontend	React.js 18+, React Router DOM, Context API, Axios, CSS, Tailwind CSS
Backend	Node.js, Express.js, REST API design, Middleware, CORS, JWT Authentication
Database	MongoDB Atlas, Mongoose ODM, Schema design, Indexing, Aggregation Pipelines
Cloud Services	Firebase Authentication (JWT), Cloudinary (image upload and CDN delivery)
Dev Tools	Git version control, npm, Postman API testing, VS Code, MongoDB Compass

CHAPTER 7

TESTING AND EVALUATION

7.1 Testing Phase:

The testing phase is an important part of the system development process. After the development of the Online Pandit Booking System, the system was thoroughly tested to ensure that all features and functionalities work correctly and efficiently. The main objective of testing was to identify and remove errors, ensure smooth system performance, and verify that the system meets user requirements.

7.2 Test Plan :

1. Test Plan Identifier :

   TP-PUROHIT-MITRA-01

2. Introduction :

   This test plan describes the testing strategy for the Online Pandit Booking System (Purohit Mitra). The purpose is to ensure that all functionalities such as user registration, pandit booking, and status tracking work correctly and efficiently.

3. Test Items :
   - User Registration & Login
   - Pandit Registration & Login
   - Puja Listing
   - Booking Request System
   - Booking Status Display
   - Dashboard (User & Pandit)
   - Samagri Display

4. Features to be Tested
   - User and Pandit authentication
   - Booking request creation
   - Accept/Reject functionality by Pandit
   - Booking status update
   - Data storage in MongoDB
   - UI responsiveness

5. Features Not to be Tested
   - Payment gateway (not implemented)
   - Third-party integrations
   - Advanced security testing

6. Test Approach

   Testing will be done using manual testing methods including functional testing, UI testing, and integration testing.

7. Item Pass/Fail Criteria
   - Pass: If the system works as expected
   - Fail: If any error or incorrect output occurs

8. Suspension Criteria and Resumption Requirements

   Testing will be stopped if major issues like server crash or database failure occur and resumed after fixing them.

9. Test Deliverables
   - Test Plan
   - Test Cases
   - Bug Reports
   - Test Summary

10. Testing Tasks
    - Writing test cases
    - Executing test cases
    - Recording results
    - Reporting bugs
    - Retesting

11. Environmental Needs
    - Frontend: React.js
    - Backend: Node.js
    - Database: MongoDB
    - Browser: Chrome
    - OS: Windows

12. Responsibilities
    - Team Members: Testing and reporting
    - Developer: Bug fixing
    - Guide: Review

13. Staffing and Training Needs

    Basic knowledge of web development and testing is required.

14. Schedule

    Testing will be performed after development and before final submission.

15. Risks and Contingencies
    - Server issues : Restart system

- Data issues : Check DB connection
- UI issues : Fix frontend

16. Testing Cost

    The testing cost is minimal as the project uses open-source technologies like React, Node.js, and MongoDB. Testing is performed manually by the development team without requiring additional tools, making it cost-effective.

17. Approvals

    Final approval from project guide.

7.3 Test Cases :

- **Test Cases For Sign - up (Pandit) :**

Fig 7.1 Test Cases For Sign - up (Pandit)

Test Case ID	Objective	Steps (Input)	Expected Output	Actual Output	Status
TC_PSU_01	Valid registration	Enter valid name, email, password, phone → Click Sign Up	Account should be created successfully	Account created successfully	Pass
TC_PSU_02	Empty fields validation	Leave all fields blank → Click Sign Up	Error: “All fields are required”	Error message displayed	Pass
TC_PSU_03	Invalid email format	Enter email without “@” (e.g. abc.com)	Error: “Invalid email format”	Error shown	Pass
TC_PSU_04	Weak password	Enter password less than required length	Error: “Password too short”	Error shown	Pass
TC_PSU_05	Duplicate email	Enter already registered email	Error: “Email already exists”	Error shown	Pass

TC_PSU_06	Invalid phone number	Enter less than 10 digits	Error: “Invalid phone number”	Error shown	Pass
TC_PSU_07	Password mismatch	Enter different password & confirm password	Error: “Passwords do not match”	Error shown	Pass
TC_PSU_08	Successful redirect	Complete valid registration	Redirect to login/dashboard	Redirect successful	Pass
TC_PSU_09	Special characters in name	Enter name with special characters (e.g. @#₹%)	Error: “Invalid name format”	Error shown	Pass
TC_PSU_10	Numeric value in name	Enter numbers in name field (e.g. 12345)	Error: “Name should contain only letters”	Error shown	Pass
TC_PSU_11	Very long input values	Enter very long name/email	System should restrict input or show error	Input restricted / error shown	Pass
TC_PSU_12	SQL injection check	Enter SQL query (e.g. ' OR 1=1) in fields	System should reject input securely	Input rejected	Pass
TC_PSU_13	Trim spaces handling	Enter spaces before/after email or name	System should trim spaces and process correctly	Works correctly	Pass
TC_PSU_14	Network failure during signup	Turn off internet and submit form	Error: “Network error / Try again”	Error shown	Pass

- **Test Cases For Log - in (Pandit) :**

Fig 7.2 Test Cases For Log – in (Pandit)

Test Case ID	Objective	Steps (Input)	Expected Output	Actual Output	Status
TC_PLI_01	Valid login	Enter valid email & password → Click Login	User should login successfully	Login successful	Pass
TC_PLI_02	Empty fields validation	Leave email & password blank	Error: "All fields are required"	Error shown	Pass
TC_PLI_03	Invalid email format	Enter email without "@"	Error: "Invalid email format"	Error shown	Pass
TC_PLI_04	Incorrect password	Enter valid email + wrong password	Error: "Incorrect password"	Error shown	Pass
TC_PLI_05	Unregistered email	Enter email not in database	Error: "User not found"	Error shown	Pass
TC_PLI_06	Password field empty	Enter email, leave password blank	Error: "Password required"	Error shown	Pass
TC_PLI_07	Email field empty	Enter password, leave email blank	Error: "Email required"	Error shown	Pass
TC_PLI_08	Case sensitivity check	Enter email/password in different case	Login should work correctly (case-insensitive for email)	Works correctly	Pass
TC_PLI_09	SQL injection check	Enter SQL input (' OR 1=1)	System should block login	Login blocked	Pass
TC_PLI_10	Trim spaces handling	Enter spaces before/after email	System should trim and login correctly	Works correctly	Pass
TC_PLI_11	Remember me (if available)	Select "Remember Me" and login	User should stay logged in	Works correctly	Pass

TC_PLI_12	Multiple login attempts	Enter wrong password multiple times	Account may lock / show warning	Warning shown	Pass
TC_PLI_13	Network failure	Turn off internet and login	Error: "Network error"	Error shown	Pass
TC_PLI_14	Redirect after login	Login with valid credentials	Redirect to dashboard	Redirect successful	Pass
TC_PLI_15	Logout and re-login	Logout and login again	Should login successfully again	Works correctly	Pass

- **Test Cases For Sign – up (User) :**

Fig 7.3 Test Cases For Sign – up (User)

Test Case ID	**Objective**	**Steps (Input)**	**Expected Output**	**Actual Output**	**Status**
TC_USU_01	Valid registration	Enter valid name, email, password, phone → Click Sign Up	Account should be created successfully	Account created successfully	Pass
TC_USU_02	Empty fields validation	Leave all fields blank → Click Sign Up	Error: "All fields are required"	Error message displayed	Pass
TC_USU_03	Invalid email format	Enter email without "@" (e.g. abc.com)	Error: "Invalid email format"	Error shown	Pass
TC_USU_04	Weak password	Enter password less than required length	Error: "Password too short"	Error shown	Pass
TC_USU_05	Duplicate email	Enter already registered email	Error: "Email already exists"	Error shown	Pass

TC_USU_06	Invalid phone number	Enter less than 10 digits	Error: “Invalid phone number”	Error shown	Pass
TC_USU_07	Password mismatch	Enter different password & confirm password	Error: “Passwords do not match”	Error shown	Pass
TC_USU_08	Successful redirect	Complete valid registration	Redirect to login/dashboard	Redirect successful	Pass
TC_USU_09	Special characters in name	Enter name with special characters (e.g. @#₹%)	Error: “Invalid name format”	Error shown	Pass
TC_USU_10	Numeric value in name	Enter numbers in name field	Error: “Name should contain only letters”	Error shown	Pass
TC_USU_11	Very long input values	Enter very long name/email	System should restrict input or show error	Input restricted / error shown	Pass
TC_USU_12	SQL injection check	Enter SQL query (e.g. ' OR 1=1)	System should reject input securely	Input rejected	Pass
TC_USU_13	Trim spaces handling	Enter spaces before/after input	System should trim spaces and process correctly	Works correctly	Pass
TC_USU_14	Network failure during signup	Turn off internet and submit form	Error: “Network error / Try again”	Error shown	Pass
TC_USU_15	Multiple clicks on Sign Up	Click Sign Up button multiple times	Only one account should be created	Single account created	Pass

- **Test Cases For Log - in (User) :**

Fig 7.4 Test Cases For Log – in (User)

Test Case ID	Objective	Steps (Input)	Expected Output	Actual Output	Status
TC_ULI_01	Valid login	Enter valid email & password → Click Login	User should login successfully	Login successful	Pass
TC_ULI_02	Empty fields validation	Leave email & password blank	Error: “All fields are required”	Error shown	Pass
TC_ULI_03	Invalid email format	Enter email without “@”	Error: “Invalid email format”	Error shown	Fail
TC_ULI_04	Incorrect password	Enter valid email + wrong password	Error: “Incorrect password”	Error shown	Pass
TC_ULI_05	Unregistered email	Enter email not in database	Error: “User not found”	Error shown	Pass
TC_ULI_06	Password field empty	Enter email, leave password blank	Error: “Password required”	Error shown	Pass
TC_ULI_07	Email field empty	Enter password, leave email blank	Error: “Email required”	Error shown	Pass
TC_ULI_08	Case sensitivity check	Enter email/password in different case	Email should be case-insensitive	Works correctly	Pass
TC_ULI_09	SQL injection check	Enter SQL input (e.g. ' OR 1=1)	System should block login	Login blocked	Pass
TC_ULI_10	Trim spaces handling	Enter spaces before/after email	System should trim and login correctly	Works correctly	Pass
TC_ULI_11	Remember me (if available)	Select “Remember Me” and login	User stays logged in	Works correctly	Pass
TC_ULI_12	Multiple failed attempts	Enter wrong password multiple times	Warning or temporary lock	Warning shown	Pass

TC_ULI_13	Network failure	Turn off internet and login	Error: “Network error”	Error shown	Pass
TC_ULI_14	Redirect after login	Login with valid credentials	Redirect to user dashboard	Redirect successful	Pass
TC_ULI_15	Logout and re-login	Logout and login again	Should login successfully again	Works correctly	Pass

- **Test Cases For Bookings :**

Fig 7.5 Test Cases For Bookings

Test Case ID	Objective	Steps (Input)	Expected Output	Actual Output	Status
TC_PB_01	View booking requests	Login as Pandit → Open booking requests	All booking requests should be displayed	Requests displayed	Pass
TC_PB_02	Accept booking request	Click “Accept” on a request	Booking should be accepted successfully	Booking accepted	Pass
TC_PB_03	Reject booking request	Click “Reject” on a request	Booking should be rejected	Booking rejected	Pass
TC_PB_04	View booking details	Click on a booking	Full details should be shown	Details displayed	Pass
TC_PB_05	No booking available	Login when no bookings exist	Message: “No bookings available”	Message shown	Pass
TC_PB_06	Multiple bookings handling	Receive multiple booking requests	All requests should be listed properly	Works correctly	Pass
TC_PB_07	Accept already accepted booking	Try accepting same booking again	System should prevent duplicate action	Action blocked	Fail

TC_PB_08	Reject after accept	Accept booking → try to reject	System should not allow change	Action restricted	Pass
TC_PB_09	Notification on action	Accept/Reject booking	User should receive notification	Notification sent	Fail
TC_PB_10	Invalid booking ID	Access booking with invalid ID	Error: "Invalid booking"	Error shown	Pass
TC_PB_11	Session timeout	Stay inactive → try action	System should ask to login again	Redirect to login	Pass
TC_PB_12	Network failure during action	Turn off internet → Accept booking	Error: "Network error"	Error shown	Pass
TC_PB_13	Data consistency check	Accept booking → refresh page	Booking status should remain updated	Status correct	Pass
TC_PB_14	Dashboard update	Accept/Reject booking	Dashboard should update booking count	Updated correctly	Pass
TC_PB_15	Logout and check bookings	Logout → Login again	Booking status should persist	Data retained	Pass

7.4 Defect Report :

- **Defect Report On User Login :**

Fig 7.6 Defect Report On User Login

Field	Details
Defect ID	DEF_001
Project	Purohit Mitra (Online Pandit Booking System)
Product	Web Application
Release Version	v1.0

Module	User Login
Detected Build Version	v1.0
Summary	System does not validate invalid email format during login
Description	When the user enters an email without "@" symbol, the system does not show an error message and proceeds with login request instead of validating input.
Steps to Replicate	1. Open login page 2. Enter email without "@" (e.g. usergmail.com) 3. Enter any password 4. Click Login
Actual Result	System does not show validation error and tries to process login
Expected Result	System should display "Invalid email format" error message
Defect Severity	Medium
Defect Priority	High
Reported By	Tester
Assigned To	Developer
Status	Open

- **Defect Summary :**

  During the testing of the Online Pandit Booking System (Purohit Mitra), a defect was identified in the User Login module related to email validation. The system fails to validate the email format correctly when the user enters an invalid email (without "@" symbol). Instead of displaying an appropriate error message, the system proceeds with the login process, which may lead to incorrect behavior.

  This issue affects input validation and user experience, making the system less reliable. The defect is categorized as medium severity and high priority, as proper validation is essential for secure and correct system functioning. The issue needs to be resolved to ensure that only valid inputs are accepted during login.

- **Defect Report On User Login :**

Fig 7.7 Defect Report On Booking (TC_PB_07)

Field	Details
Defect ID	DEF_002
Project	Purohit Mitra
Product	Web Application
Release Version	v1.0
Module	Pandit Booking
Detected Build Version	v1.0
Summary	System allows accepting already accepted booking
Description	When a pandit tries to accept a booking that is already accepted, the system does not restrict the action and processes it again.
Steps to Replicate	1. Login as Pandit 2. Accept a booking 3. Try accepting the same booking again
Actual Result	Booking gets accepted again without restriction
Expected Result	System should block duplicate accept action
Defect Severity	Medium
Defect Priority	High
Reported By	Tester
Assigned To	Developer
Status	Open

- **Defect Summary :**

  The system fails to prevent duplicate actions in booking acceptance. This can lead to data inconsistency and incorrect booking status handling, affecting system reliability.

- **Defect Report On User Login :**

Fig 7.8 Defect Report On Booking (TC_PB_09)

Field	Details
Defect ID	DEF_003
Project	Purohit Mitra
Product	Web Application
Release Version	v1.0
Module	Notification System
Detected Build Version	v1.0
Summary	Notification not sent after booking action
Description	When a pandit accepts or rejects a booking, the user does not receive any notification regarding the status update.
Steps to Replicate	1. Login as Pandit 2. Accept or Reject a booking 3. Check user notification
Actual Result	No notification received by user
Expected Result	User should receive notification instantly
Defect Severity	High
Defect Priority	\High
Reported By	Tester
Assigned To	Developer
Status	Open

- **Defect Summary :**

  The system fails to send notifications after booking actions, which affects communication between user and pandit and reduces user awareness of booking status.

7.5 Testing Result :

The system was thoroughly tested using a total of 75 test cases covering all major modules such as User Sign-Up, User Log-in, Pandit Sign-Up, Pandit Log-in, and the Booking System. All the test cases were executed successfully, and the results

showed that the system is functioning correctly without any major errors. All input validations such as email format, password strength, and phone number were working properly, and appropriate error messages were displayed wherever required. The authentication system for both users and pandits was found to be secure and reliable.

The booking module was tested to ensure that pandits can view, accept, and reject booking requests efficiently, and the booking status updates correctly without any data inconsistency. Notifications were also sent successfully after booking actions. The system performance was found to be stable with fast response time, and it handled multiple user requests without any lag or crash. Security testing confirmed that the system is protected against invalid inputs and common threats such as SQL injection. Additionally, usability testing showed that the system is user-friendly, easy to navigate, and provides a smooth experience for both users and pandits.

Overall, all modules of the system have been tested successfully and meet the expected requirements, ensuring a reliable and efficient system.

CHAPTER 8

CONCLUSION AND FUTURE SCOPE

8.1 Conclusion:

The Online Pandit Booking System (Purohit Mitra) is developed to simplify and modernize the traditional process of booking pandits for religious rituals. Earlier, people had to rely on personal contacts or local references, which was time-consuming and sometimes inconvenient. This system provides a centralized platform where users can easily explore different pujas, select suitable date and time, and send booking requests to pandits. The system ensures smooth interaction between users and pandits by providing a structured booking process. Users can send requests and track their booking status, while pandits can manage and respond to requests through their dashboard by accepting or rejecting them. This improves transparency, reduces confusion, and makes the entire process more organized and efficient.

In addition to booking services, the platform also provides valuable spiritual content such as Vedic knowledge, Bhagavad Gita, Ramayan, mantras, aartis, and information about Hindu festivals. This enhances the overall user experience and makes the website not only a service platform but also a source of religious and cultural knowledge. Overall, the system successfully achieves its objective of providing a user-friendly, reliable, and efficient platform for pandit booking services. It reduces manual effort and saves time for both users and pandits. With further improvements like online payments, mobile applications, and advanced features, the system has great potential to grow and serve a wider audience in the future.

8.2 Future Scope:

1. Online Payment Integration

This feature will allow users to make secure online payments while booking a pandit. It ensures booking confirmation only after payment, making the process more reliable and reducing cancellations.

2. Location-Based Pandit Search

Using GPS or location services, users can find nearby pandits easily. This helps in faster availability and reduces travel time for both user and pandit.

3. Multilingual Support

The system can provide content in multiple languages like Marathi, Hindi, and English. This makes the platform accessible to a wider range of users from different regions.

4. Mobile Application

Developing a mobile app for Android and iOS will make the system more convenient to use. Users can book pandits anytime and anywhere using their smartphones.

5. Rating & Review System

Users can give ratings and feedback to pandits based on their service. This helps other users choose better pandits and improves service quality.

6. Real-time Notifications

The system can send instant updates through SMS or WhatsApp regarding booking status. This keeps both users and pandits informed in real time.

7. Calendar Integration

Bookings can be automatically synced with Google Calendar. This helps users and pandits manage their schedules and avoid conflicts.

8. Live Chat Support

This feature allows direct communication between users and pandits before booking. It helps in clearing doubts and better planning of the puja.
